

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 93.] **Marriages**—October, November, December, 1871. [Price 8½d.
Births and Deaths—January, February, March, 1872.

General Register Office, Somerset House,
1st May 1872.

In the UNITED KINGDOM the *births* of 279,307 children, and the *deaths* of 185,482 persons of both sexes, were registered in the three months ending 31st March 1872. The natural increase of population was thus 93,825.

The registered number of persons married in the quarter ending *December* 31st, 1871, was 143,626.

The resident population of the United Kingdom in the middle of 1872 is estimated at 31,858,930; that of England and Wales amounting to 23,074,600, of Scotland to 3,397,622, and of Ireland to 5,386,708. The corrected* birth-rate of the quarter was 36·1 per 1000; the death-rate 23·6; and the marriage-rate in the fourth quarter of the year 1871 was 18·8 per 1000.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2195 Registrars in all the districts of England during the quarter ending 31st March 1872; and the MARRIAGES in 13,385 churches or chapels, in 6641 registered places of worship unconnected with the Established Church, and in 626 Superintendent Registrars' offices, in the three months ending 31st December 1871.

The marriages in the last quarter of the year 1871 exceeded the ordinary excess of the season; and the increase is no doubt due to the reviving prosperity of the country.

The birth-rate in the winter quarter of this year was slightly under the average; the death-rate was low both in town and country. The frosts of the last months of 1871 had proved fatal to many old people, who, like the leaves of autumn, are easily shed; and the survivors enjoyed the mild and exceptional winter that followed, so several thousands of them are alive who must have succumbed had the winter been severe. Small-pox became epidemic at the end of 1870 and raged through the following year; it grew excessively fatal in the spring of 1871 and then declined; but in the past winter it was more fatal than before, and 7720 children and others died of the disease. Scarlet fever and fever were less prevalent than they had been; measles and especially whooping-cough became more active and fatal.

* In calculating the birth, death, and marriage rates for the United Kingdom, a correction has been made in the Irish Returns—with the authority of the Registrar-General of Ireland—for defective registration. It is assumed that births, deaths, and marriages bear the same proportion to population in Ireland as in England. The registered births and deaths in Ireland for the quarter ending 31st March 1872 were 41,069 and 29,244 respectively, and the marriages registered during the quarter ending 31st December 1871 were 6134. The corrected numbers on the above assumption were,—births 48,729, deaths 31,514, and marriages 9208. The population of Ireland is taken to be the same as was estimated for the middle of 1871.

Marriages.

In the quarter ending 31st December 1871, 116,996 persons were married, a greater number than has been recorded in any previous quarter. The annual rate was 20·4 per 1000, which is higher than that in any quarter since the corresponding one of 1866, and ·7 above the mean rate for the fourth quarter of the 10 years 1862-71. On comparison with the average number of marriages registered in the corresponding quarter of the three years 1868-70, the English counties in which the greatest increase occurred, in proportion to population, were Nottinghamshire, Durham, Warwickshire, and Monmouthshire, while Westmorland was the only county which showed a decrease.

Births.

In the first quarter of 1872, the births of 208,737 children born alive were registered, showing an annual rate of 36·3 per 1000, which is ·8 below the average rate for this quarter of the year. Of the counties, Westmorland, Somersetshire, and Nottinghamshire showed, in proportion to their respective populations, the greatest increase upon the average of the three previous corresponding quarters, and Norfolk, Oxfordshire, and Northamptonshire the greatest proportional decrease.

Increase of Population.

The natural increase of the population, or the excess of births over deaths, amounted during the quarter to 73,745, or 810 per day. The actual increase is affected largely by emigration.

The number of emigrants of British origin who sailed from ports in the United Kingdom at which Government emigration officers are stationed, was 25,660 ; * of whom 15,060 were of English, 1942 of Scotch and 8658 of Irish origin. The total number shows a slight excess over the emigration recorded in the corresponding quarter of last year, the increase being for the most part amongst the emigrants of English origin. Of the above 25,660 persons, 22,931 were bound for the United States, 402 for British North America, and only 1103 for the Australian Colonies, against 2134 in the March quarter of 1871.

Prices, Pauperism, and the Weather.

The price of wheat showed a further slight decline last quarter, the average quotation being 55s. 4d. per quarter against 56s. 3d. in the previous three months.

The average price of potatoes per ton at the waterside market, Southwark, which in the four quarters of the year 1871 was respectively 87s. 6d., 63s. 6d., 68s. 6d., and 89s. 6d., rose to 100s. in the quarter ending 31st March last.

The price of beef and mutton by the carcase at the Metropolitan meat market averaged 6½d. and 7½d. per lb. respectively. In the year 1852 the average price per lb. of beef was 4½d. and of mutton 4½d. In the year 1854 beef had risen to 5½d., and from that time until 1868 the average price for each year ranged from 5½d. to 5¾d. In the three years 1869, 1870, and 1871 it was 6½d., 6d., and 6¾d. respectively. Mutton rose in 1853 to an average price of 5½d. per lb., and ranged between 5½d. and 6¼d. in the following years until 1865, when it reached 7d. In the five succeeding years it ranged from 6d. to 6¾d., except in 1868 when it fell to 5½d. In 1871 it was again 7d., and in the first quarter of 1872, as above stated, 7½d. The increase in price between 1852 and 1872 in the price of beef was 48 per cent. and in the price of mutton 46 per cent.

Upon classifying them according to years in quinquennial periods, there is seen a progressive rise in the prices of both mutton and beef. Beef was never dearer in the London market than it is now ; and taking the average of the first five years 1852-56 and the last 1867-71, the rise was 17 per cent. ; in the same periods the price of mutton rose 11 per cent. Upon comparing the first with the last ten years, the prices of both meats rose about 9 per cent. ; but the prices of wheat and potatoes declined. The price of beef may have been affected by the cattle plague, and the

* This information is obtained from a Return with which the Registrar General is favoured by the Emigration Commissioners. The total number of emigrants was 35,555 ; 9,895 being foreigners. In the numbers here given, 558 cases, in which the origin was undistinguished, have been distributed proportionally amongst those in which the origin was stated.

measures of restriction to which it led. Prices too during the whole period have no doubt been enhanced by the depreciation in the value of money circulating in the world. The exorbitant price of butcher's meat might be reduced to some extent by diminishing the consumption, which in many families is excessive; as it is well known that bread, fruit, potatoes, vegetables, and similar diet furnish adequate sustenance to all adults, except to the men employed in severe physical labour, and, among them, agricultural labourers in many counties get little animal food. Greater simplicity in public dinners, where so much food is wasted, might lead to private economy.

Pauperism declined to a considerable extent last quarter. The average number of paupers relieved on the last day of each week was: In-door 149,599; Out-door 776,793. As compared with the winter quarter of 1871, the decrease in the number of paupers receiving in-door relief amounted to 11,385, and in the number of those receiving out-door relief to 102,099. The average numbers for the past quarter were less than in any previous corresponding quarter since 1866.

Mr. Glaisher's remarks on the Meteorology of the quarter will be found on pp. 65-7.

The warm weather which set in on 13th December 1871, following a period of unprecedented cold, continued with few and slight exceptions till the 18th of March; the mean temperature of these 97 days was more than 5° above their average; then followed 8 days of severely cold weather, in the temperature of which the average daily deficiency was $7\frac{1}{4}^{\circ}$; the remaining five days of the quarter were warm. At the corresponding season in the last 100 years the warmth of the past three months has been but once equalled, viz., in the year 1846, and has never been exceeded. The mean temperature for the quarter was $43^{\circ}\cdot6$ or 5° above the average of 101 years.

The rain-fall during the past quarter amounted to 6·5 inches or 1·4 above the average. In February it was only half the average fall, but in both January and March it was in excess.

State of the Public Health; Deaths.

ENGLAND.—In the first or winter quarter of 1872, ending 31st March, 134,992 deaths were registered in England and Wales; after making due allowance for increase of population, this number was considerably below the average number in the corresponding quarter of recent years, notwithstanding the epidemic of small-pox which showed a somewhat increased and more general fatality.

The annual death-rate was equal to 23·5 per 1000 of the estimated population, against 25·3, the average rate in the first quarters of the ten years 1862-71; the rate in the first quarters of those years ranged from 22·1 in 1868 to 27·6 in 1864. Temperature exercises a more direct influence upon mortality in the first quarter than in other parts of the year. A severe winter invariably produces a high death-rate. The effect of temperature, however, is partially disturbed by the varying fatality of epidemic diseases. In the ten years, 1862-71, the temperature of the three coldest first quarters averaged $37^{\circ}\cdot5$ Fahrenheit, and the annual death-rate 26·9 per 1000; while in the three warmest first quarters the mean temperature was $41^{\circ}\cdot8$, and the average death-rate did not exceed 24·0 per 1000. The mean temperature last quarter averaged so much as $43^{\circ}\cdot6$, and but for the somewhat counteracting influence of the small-pox epidemic the death-rate would have been unusually low.

In the Eleven Registration Divisions of England and Wales the annual death-rate ranged from 19·2 and 20·8 in the South-eastern and South Midland to 26·6 and 27·3 in the North-western and Northern Divisions. The deaths registered in each of the Divisions were below the average number in the three previous corresponding quarters, except in Yorkshire and the Northern and Welsh counties; the excess in these three divisions was principally due to the small-pox epidemic.

In the principal town districts of the country, comprising all the large towns, and a population of about 13 millions, the annual death-rate last quarter was equal to 25·4 per 1000. The remaining or rural population is about 10 millions, among whom the death-rate did not exceed 20·9 per 1000. The urban rate was 2·0, and the rural rate 1·7, per 1000 below their average rates in the corre-

sponding quarter of the ten years 1862-71. If from the entire urban population be excluded 68 of the largest towns, for which special information is given in Tables VI-IX, it will be found that the death-rate in the smaller towns last quarter was equal to 24·6 per 1000. Allowance being made for the excessive mortality from small-pox in town districts, it will be seen that the remarkably mild weather which prevailed during the first three months of this year more favourably affected the town than the country death-rates. This result further confirms a fact which has previously been proved from these returns, namely, that it is town populations which suffer most from the rigors of a severe winter.

The 134,992 deaths from all causes, at all ages, in England and Wales during last quarter included 31,123, or 23·1 per cent., of infants under one year of age, and 32,452, or 24·0 per cent., of persons aged 60 years and upwards. The infant mortality showed a slight increase upon that prevailing in the first quarter both of 1870 and 1871, which was 22·6 per cent., while measured by the proportion of deaths under one year to births registered it was 14·9 per cent. last quarter, against 15·8 and 14·9 in the two previous corresponding quarters. The mild weather exercised a direct influence upon the proportion of the deaths of elderly persons, which, as above stated, did not exceed 24·0 per cent., while in the first quarters of 1870 and 1871 it had been 26·3 and 25·6 per cent. respectively.

To the seven principal diseases of the zymotic class 24,794 deaths were referred in England and Wales during the first three months of this year against 26,997 in the last quarter of 1871; these deaths were equal to an annual death-rate of 4·3 per 1000 of the estimated population, while in the first quarters of 1870 and 1871 the rate from these seven diseases did not exceed 3·6 and 3·8 per 1000 respectively.

The 24,794 deaths from these diseases included 7720 from small-pox, 3121 from measles, 3385 from scarlet fever, 586 from diphtheria, 4699 from whooping-cough, 3544 from different forms of fever, and 1739 from diarrhoea. The fatal cases of small-pox were considerably more numerous than in any quarter since the present epidemic broke out in the latter part of 1870. The deaths from measles were 642 less than the number in the last quarter of 1871, but considerably exceeded the average in the seven previous quarters. The fatality from scarlet fever was lower than in any recent quarter, the deaths from this disease having showed a steady decline from 11,746 in the last quarter of 1870 to 3385 in the first three months of this year. The deaths from diphtheria have varied but slightly in the past nine quarters. Whooping-cough is usually most fatal in the winter quarter of the year, but it was exceptionally fatal in the three months ending March last, causing 4699 deaths against 4451 and 2632 in the corresponding period of 1870 and 1871. The 3544 deaths referred to fever, principally of the enteric or typhoid type, declined from the numbers in the corresponding quarters of 1870 and 1871, which were 4177 and 4073 respectively. The deaths from diarrhoea are never numerous in the first three months of the year.

The continued fatal prevalence of the small-pox epidemic calls for more detailed notice. The deaths from this disease in the first three quarters of 1870 averaged only 450, but in the last quarter rose to 1229; in the four quarters of 1871 they were successively 4903, 7012, 4612, and 6380; last quarter they further rose to 7720, which considerably exceeded the number in any quarter of the past 32 years, and were equal to an annual death-rate of 1·3 per 1000 persons living. Of these 7720 deaths last quarter 1179 were recorded in the three Ridings of Yorkshire, 1075 in the Northern, 900 in the Welsh, 862 in the West Midland, and 831 in the Metropolitan Registration Divisions. The epidemic first became fatally prevalent in London and in the large Lancashire towns; here the numbers of deaths have shown a steady decline in recent quarters. The next most important outbreak occurred in the Northern counties, especially in Northumberland and Durham, and apparently reached its climax in the latter part of last year, as the fatal cases last quarter had considerably declined, although again exceedingly numerous in many town districts of those counties. The deaths from small-pox showed a marked and general increase in each of the eight other Registration Divisions, especially in South Wales. It will be useful briefly to note a few of the places in the different divisions in which the epidemic was most fatal, or in which new outbreaks occurred during last quarter. In the South-eastern counties, 67 deaths from this disease occurred in Dover, and 43 in Ports-

mouth, while they had declined in Alverstone. In the South Midland counties the most notable outbreak occurred at Northampton, resulting in 157 deaths against 47 in the preceding three months; Bishop Stortford, St. Albans, Bedford, Biggleswade, Cambridge, and Wisbech also suffered from the disease. The 611 deaths in the Eastern counties included 53 in West Ham, 91 in Yarmouth and Mutford, 273 in Norwich, and 18 in Thetford; the fatality in Norwich showed a considerable decline in the latter part of the quarter. In the South-western counties Plymouth and the surrounding Districts formed the principal centre of infection in which 233 fatal cases were reported; the epidemic also prevailed in Bridport, Bideford, Redruth, Bridgwater, and Yeovil. Of the 862 deaths in the West Midland counties, 263 were returned in Wolverhampton, which was the first important centre of infection in the Division; these showed a slight decline from the number in the preceding three months, and the violence of the epidemic had considerably abated during March and the early weeks of April; the other towns of this Division in which the disease most severely prevailed were Walsall, Dudley, Stourbridge, Coventry, Wellington (Salop), and to a less extent Bristol and Birmingham. Nottingham was the principal centre of infection in the North Midland counties, in which town 170 of the 588 deaths from small-pox occurred, showing a considerable increase upon the previous quarter; the epidemic also became fatally prevalent last quarter in the neighbouring Districts of Radford, Basford, Mansfield, and Worksop; and also prevailed in Chesterfield, Belper, and Ashby-de-la-Zouch; towards the end of the quarter, and during April, the disease became epidemic in Leicester. In the North-western counties the deaths from small-pox showed a general decline last quarter, which was most conspicuous in Liverpool, Birkenhead and Manchester. In the Yorkshire Division the deaths from small-pox, which had been 69, 98, 129, and 708 in the four quarters of 1871, further rose to 1179 in the first three months of this year; of these, 895 occurred in the West Riding, including 430 and 88 in the boroughs of Sheffield and Leeds, and 63 in Doncaster, 60 in Wakefield, and 48 in Pontefract Districts; of the 169 deaths in the East Riding, 118 occurred in the borough of Hull, and 20 in York district; the 115 in the North Riding included 38 in Scarborough, 36 in Malton, and 18 in Guisborough Districts, respectively. In the Northern Division the fatal cases which had been 1566 and 1546 in the two preceding quarters declined to 1075 in the three months ending 31st March last, of which 781 occurred in the county of Durham, 262 in Northumberland, 32 in Cumberland, while Westmorland was the only one of the English counties in which no death from small-pox occurred; in Durham county the epidemic, although still fatally prevalent in the mining districts, showed a general decline, especially in Sunderland, South Shields, and Gateshead, but in Auckland District the fatal cases rose from 105 in the last three months of 1871, to 199 last quarter; in Northumberland the decline was general, but most marked in Newcastle and Tynemouth; the deaths from this cause in Cumberland were principally confined to Cockermouth and Wigton, and showed a decline upon those in the preceding three months. In the Welsh Registration Division, including the county of Monmouth, the fatal small-pox cases, which had been 141 and 539 in the two preceding quarters, rose to 900 in the first three months of this year; of these, 334 occurred in Monmouthshire and 420 in Glamorganshire, so that the number in the rest of South and North Wales did not exceed 146; Bedwelty and Newport Districts in Monmouthshire, and Merthyr Tydfil, Neath, and Pontypridd in Glamorganshire, suffered most severely from the epidemic; in other parts of Wales the disease was prevalent in Crickhowell, Holywell, St. Asaph, and Carmarthen.

The annual death-rate from small-pox in England and Wales during the first three months of this year was, as before stated, equal to 1.3 per 1000 of the estimated population, against 1.1 in the last quarter of 1871. In the 18 largest English towns, the 2585 fatal cases were equal to an average annual rate of 1.6 per 1000; while in 50 other large towns 1296 deaths from small-pox occurred, or equal to 2.1 per 1000. In England and Wales, exclusive of these 68 large towns, which are now estimated to contain a population of 8,893,299 persons, the deaths from small-pox last quarter were therefore 3839, or equal to an annual rate of nearly 1 per 1000 of a population of rather more than 14 millions. The following are a few of the highest death-rates from small-pox per 1000 persons living during

last quarter :—among the 18 largest cities and boroughs, 13·5 in Norwich, 9·3 in Wolverhampton, 7·7 in Nottingham, and 7·0 in Sheffield ; among the 50 other large town districts, 12·8 in Northampton, 9·8 in Newport (Monmouth), and 7·6 in Dover ; in other town registration sub-districts, 23·8 in Bideford, 15·2 in Tredegar, 14·9 in Bridport, 14·5 in Bishop Auckland, 14·0 in Cadoxton, 13·5 in Radford, 12·8 in Castleford, 12·4 in Malton, 12·0 in Yeovil, and 11·9 in Llantrisant.

With regard to the distribution of the fatal cases of the other zymotic diseases it may be briefly remarked that measles was proportionately most prevalent in London, Staffordshire, Lancashire, Durham, and the West Riding of Yorkshire ; the districts of Bolton and Cardiff showed excessive numbers. Although the deaths from scarlet fever were less numerous than in recent quarters, the disease was more or less epidemic in parts of Staffordshire, Lancashire, the West Riding of Yorkshire, Durham and Cumberland ; Wolstanton, Stoke-upon-Trent, Bury, Burnley, Todmorden and Whitehaven were among the districts which suffered from exceptional prevalence of this disease. The deaths from whooping-cough were exceptionally high last quarter, and the disease was especially fatal in London, Liverpool, Manchester, and West Bromwich. The death-rate from fever was considerably lower than in recent corresponding quarters, but, as usual, showed an excess in the manufacturing districts of Lancashire and Yorkshire ; in Nottinghamshire the deaths from fever had considerably declined from the high number returned in the last three months of 1871, but they were again excessive ; the fatality from fever was exceptionally high in the borough of Sunderland and in Strood (Kent), Whitechurch (Hants), Radford, Yarm, and Llanelly sub-districts. A considerable reduction in the death-rate from fever has occurred in recent years, and has been especially conspicuous in London. There is little doubt but that this result is directly due to an increased efficiency in sanitary supervision. When the whole country shall have been brought under the organised control of sanitary authorities we may hope for a still more strongly marked decline in the fatality from zymotic diseases. So long, however, as the appointment of health officers, even in large towns, is optional, and so long as rural districts are not formed into organised sanitary districts, it is almost futile to hope for a more rapid decrease of the waste of life from these causes which is continually occurring around us.

During the three months ending 30th March last 6193 deaths in England and Wales, or 4·6 per cent. of the total deaths were registered upon the information of the coroners, being inquest cases, against 6789 and 6910 in the corresponding quarters of 1870 and 1871. The deaths referred to different forms of violence during last quarter were 3885, and corresponded with the number in the first three months of 1871 ; the proportion to total deaths was 2·9 per cent.

In the large public institutions of England and Wales, including workhouses, hospitals, and public lunatic asylums, 12,058 deaths were recorded last quarter against 13,394 in the corresponding period of 1871 ; the proportion was 8·9 per cent. of the total deaths, while in the first quarter of 1871 it was 9·7 per cent. ; this decrease occurred principally in the deaths in workhouses, and was due to the mild weather which favourably influenced the death-rate among elderly people.

EIGHTEEN LARGE ENGLISH TOWNS.—The information published from time to time in the Weekly Return bearing upon the death-rates and the prevalence of zymotic disease in these 18 towns renders it unnecessary to refer to them here in much detail ; it will be useful, however, briefly to glance at the summary of the figures for the past quarter. The annual rate of mortality was equal to 25·7 per 1000, which but slightly exceeded the rate in the entire urban population of England and Wales ; exclusive of the rate from small-pox it would not have exceeded 24·1 per 1000. Among the 18 towns the death-rate from all causes was lowest, 21·2 in Portsmouth, 21·7 in Birmingham, and 23·4 in Leicester ; while it was 30·5 in Manchester, 30·6 in Nottingham, 33·0 in Sunderland, 34·2 in Norwich, and 35·8 in Wolverhampton. The fatal epidemic of small-pox was the principal cause of the excessive rate in each of the last four towns. The annual death-rate from the seven principal diseases of the zymotic class averaged 5·1 per 1000 in the 18 towns against 4·3 in the whole of England and Wales, and ranged from 3·4 per 1000 in both Birmingham and Portsmouth to 10·3 in Sheffield, 12·2 in Wolverhampton, and 14·8 in Norwich. The death-rate from zymotic diseases in

Liverpool last quarter was but 4·0 per 1000, or 1·1 below the average rate in the 18 towns, and, with the exception of Portsmouth, Birmingham, Leicester, and Bradford, was lower than in any of the 18 towns, including London; the death-rate from all causes in this town also showed a remarkable decline from that which has prevailed in recent corresponding quarters. Infant mortality in the 18 towns, measured by the proportion of deaths of children under one to births registered, averaged 15·7 per cent. last quarter against 14·9 in the whole of England and Wales, and ranged from 12·8 per cent. in Portsmouth and 13·5 in Birmingham, to 19·8 in both Oldham and Bradford and 21·1 in Wolverhampton. The proportion of inquest cases registered in the quarter averaged 6·0 per cent.; it was so low as 3·0 per cent. in Bradford, while it was 7·1 in Liverpool and 9·7 in Birmingham. The per-centage of deaths referred to different forms of violence was but 2·1 in Bradford, while it was 4·4 in Birmingham, 4·5 in Newcastle-upon-Tyne, and 5·3 in Liverpool. The proportion of deaths in institutions, which was 14·1 and 15·9 per cent. respectively in the first quarters of 1870 and 1871, was 14·6 per cent. last quarter, and ranged from 5·8 and 6·6 per cent. in Oldham and Bradford to 15·6, 17·7, and 19·5 per cent. respectively in Liverpool, London, and Nottingham; the high percentage in the last-named town was due to the deaths caused by small-pox.

FIFTY OTHER LARGE TOWNS.—In the registration sub-districts taken to represent 50 other large English towns, ranking in respect of population next in size to the 18 largest towns, the annual death-rate last quarter averaged 26·1 per 1000, or 0·4 per 1000 higher than in the 18 towns. The rate from the seven principal zymotic diseases was 5·6 per 1000, which showed an excess of 0·5 per 1000 upon that in the 18 towns. The lowest death-rates from all causes among the 50 towns were:—Derby 19·2, Chatham 19·7, Hastings 20·3, Lincoln 20·5, Reading 20·6, Southampton 21·1, Worcester 21·5, and Colchester 21·7. The highest rates were:—Northampton 30·8, Newport (Monmouth) 31·9, South Shields 34·3, Bolton 35·4, and East Stonehouse 40·8; small-pox was severely epidemic in all these five towns, except in Bolton, where, in addition to the prevalence of small-pox, an excessive fatality was shown from both measles and scarlet fever.

LONDON.—The deaths registered among the three and a quarter millions of the population residing within the Metropolitan Registration Division are each week classified according to disease and age, and it is therefore possible to consider the influence which the unusually mild weather of the first three months of the year exercised upon this important section of the nation. The death-rate from all causes was equal to 24·0 per 1000 against 25·4, 26·7, and 26·9 in the first quarters of the three years 1869–70–71. Exclusive of the deaths from the seven principal zymotic diseases, which are not influenced by temperature to the same extent as are other classes of diseases, the death-rate in London in the March quarters of the three years 1870–1–2 has been successively 22·6, 21·2, and 19·5 per 1000. In connection with these rates it is necessary to bear in mind that the mean temperature in those quarters was 38°·0, 40°·2, and 43°·6 respectively. The death-rates from diseases of the respiratory organs, including phthisis, in the first quarters of 1871 and 1872 were respectively 8·6 and 8·1 per 1000; from heart diseases 1·4 and 1·2; from brain diseases 3·0 and 2·6; and from old age 1·0 and 0·8, leaving 7·2 and 6·8 per 1000 as the rates from all other diseases.

Of the 3737 deaths from the seven principal zymotic diseases last quarter, 1356 were referred to whooping-cough, 831 to small-pox, 635 to measles, 402 to fever, and 321 to scarlet fever. The fatal cases of small-pox in London reached their maximum in the June quarter of 1871, when 3241 were returned, since which the quarterly numbers have declined successively to 1255, 980, and 831. The weekly numbers last quarter ranged between 93 and 42. Whooping-cough was epidemic throughout the quarter, and the weekly deaths ranged from 92 in the first, to 118 in the thirteenth weeks. The fatality both from scarlet and enteric fevers was unusually low. No less than 639 deaths in London were referred to different forms of violence, showing a slight increase upon the 621 so returned in the last quarter of 1871.

From official returns furnished from time to time by various authorities the following facts bearing upon the recent health of several Indian and foreign cities are compiled.

INDIAN CITIES.—Weekly Returns are now received from Calcutta, Bombay, and Madras, illustrating strikingly the sanitary condition of these three important cities in British India. These statistics will acquire greater value when the population figures obtained from the recent Census enumeration are received; at present they are only available for Madras, and show that the population of that city had recently been far over-estimated; the populations which have been recently used for Calcutta and Bombay are also probably over-stated. So the mortality of those cities is understated; but the statistical machinery at work is obtaining attention, and will no doubt soon be improved. In Calcutta during the 13 weeks ending 16th March, 2862 deaths were returned, and the death-rate on the estimated population was equal to 27 per 1000; the 4959 deaths in Bombay during the 13 weeks ending 2d April give a death-rate of 24 per 1000 on the population enumerated in 1864, and small-pox was fatally prevalent during the latter part of the quarter; in Madras during the 13 weeks ending 22d March, the deaths returned were equal to an annual rate of 34 per 1000 of the 395,440 persons enumerated in November 1871.

FOREIGN CITIES.—In Paris during the 13 weeks ending 29th March 10,287 deaths were registered, and the annual death-rate calculated upon the provisionally estimated population, which is probably over-stated, did not exceed 23 per 1000; the city was comparatively free from epidemics. The death-rate in Brussels, after deducting the deaths of non-residents in institutions, was also 23 per 1000, and the proportion of deaths from zymotic diseases was not excessive. In Berlin, during the 13 weeks ending 28th March, 8434 births and 6912 deaths were registered; the annual birth-rate was 41 and the death-rate 34 per 1000; small-pox was again fatally prevalent in the city and caused 931 deaths, or equal to an annual rate of 4.5 per 1000. The returns from Vienna for the quarter are not complete. Weekly returns are now regularly received from three of the principal Italian cities, Rome, Florence, and Turin, and recent enumerations of the population give additional value to the information they contain. In Rome during the first quarter of the year the birth-rate was 29, and the death-rate 43, the excess of the latter was due in great measure to the small-pox epidemic which caused 403 deaths, or equal to a rate of 6.6 per 1000; in Florence the birth-rate last quarter was 36, and the death-rate 31 per 1000; in Turin the birth-rate was 33, and the death-rate 30, the proportion of deaths from zymotic diseases appearing to have been very low.

In New York during the first thirteen weeks of the year the deaths were at the annual rate of 32 per 1000; both small-pox and scarlet fever were somewhat prevalent, and during the last few weeks of the quarter the new form of disease termed cerebro-spinal-meningitis became epidemic and showed a rapidly increasing fatality.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures in this column are (with the exception of those for London) the unrevised numbers enumerated in April last, raised to the middle of the year by adding 1-40th of the rate of increase which prevailed between 1861 and 1871; the numbers for Edinburgh and Glasgow have been furnished by the Registrar General of Scotland, while that for Dublin is still the estimated number recently used.

† The rates for these years will not be found to correspond with those previously published, as they have been re-calculated on new populations based upon the recently enumerated numbers.

TABLE VII.—Deaths in 18 large English Towns in the 13 Weeks ending 30th March 1872
(Estimated aggregate population in middle of 1872, 6,388,205; viz., 3,311,298 in London, and 3,076,907 in the remaining 17 Towns; see note to Table VI.)

Blackburn - - - M -	78,172	835	572	42.7	29.3†	3.7	{ Blackburn Sub-district.
Preston - - - M -	85,738	915	627	42.7	29.3†	4.6	{ Preston Sub-district.
IX.—YORKSHIRE.							
Huddersfield - - - P -	39,159	326	223	33.3	22.8†	4.6	{ Huddersfield Sub-district.
Halifax - - - M -	48,838	400	295	32.8	24.2†	5.4	{ Halifax Sub-district.
York - - - M -	56,663	484	403	34.2	28.4†	2.9	{ Bootham, Micklegate, and Walmgate Sub-districts.
X.—NORTHERN COUNTIES.							
South Shields - - - M -	79,308	819	681	41.3	34.3	13.4	{ Entire District.
Gateshead - - - M -	50,082	532	364	42.5	29.1	7.3	{ Gateshead Sub-district.
Tynemouth - - - M -	41,368	369	313	35.7	30.3	7.9	{ North Shields and Tynemouth Sub-districts.
Carlisle - - - M -	34,154	313	210	36.7	24.6†	3.5	{ St. Cuthbert & St. Mary Sub-dists.
XI.—MONMOUTHSH. & WALES.							
Newport (Monmouth) - M -	30,596	275	244	36.0	31.9†	12.2	{ Newport Sub-district.
Cardiff - - - M -	67,076	595	335	35.5	23.0†	6.6	{ Cardiff Sub-district.
Merthyr Tydfil - - P -	95,925	996	679	41.5	28.3	9.1	{ Lower and Upper Merthyr Tydfil and Aberdare Sub-districts.
Swansea - - - M -	69,182	671	393	38.8	22.7	4.2	{ Swansea and Llangafelach, and Llansamlet (Neath) Sub-dists.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts in the last column approximately represent, are Municipal or Parliamentary.

* For method of framing these estimates see note * to Table VI.
† These rates of mortality have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Asylums, situate within the districts or sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

MARRIAGES

Registered in the Quarter ending 31st December 1871.

BIRTHS AND DEATHS

Registered in the Quarter ending 31st March 1872.

Marriages Registered in the Quarter ending 31st December 1871 in the DIVISIONS, REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS OF ENGLAND. **Births** and **Deaths** Registered in the Quarter ending 31st March 1872; Deaths from SMALL-POX, MEASLES, SCARLET FEVER, DIPHTHERIA, WHOOPING COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE; also INQUEST CASES and DEATHS IN PUBLIC INSTITUTIONS in the Quarter ending 31st March 1872 in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and REGISTRATION SUB-DISTRICTS OF ENGLAND.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties. † See page 14, note § The enumerated population of London in April 1871, as revised at the Census Office, was 3,254,260; the revised numbers for the rest of England and Wales are not yet available.

NOTE.—The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.

ages Registered in the Quarter ending 31st December 1871 in the DIVISIONS, REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS OF ENGLAND. Births and Deaths Registered in the Quarter ending 31st March 1872; Deaths from SMALL-POX, MEASLES, SCARLET FEVER, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE; also INQUEST CASES and DEATHS in PUBLIC INSTITUTIONS in the Quarter ending 31st March 1872 in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and REGISTRATION SUB-DISTRICTS OF ENGLAND—continued.

* The Sub-districts (2195 in number) comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse, or in some instances an Industrial School, belonging to another District or Union is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† Alterations in the limits of some of the Registration Sub-districts have been made within the period for which the average has been formed. In these cases the deaths entered in the column headed "Average" have been proportioned to the population, and the estimate number distinguished thus †.

† The numbers of Births and Deaths, as well as the details given "Under 1 year of age" and the twelve subsequent headings, this Table for London, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 31st December 1870 to 20th March 1872.

I.—LONDON.—REGISTRATION SUB-DISTRICTS—continued.

29: 2.—Scarlet fever prevailed for a short time in the neighbourhood of a large cesspool containing many loads of putrid matter, excrements were taken against the owner of the property.
 39: 2.—All the deaths from scarlet fever occurred in Barnes. The prevalence of the disease is attributed to defective drainage and water, most of the houses being supplied with water from wells sunk in a sandy soil and within a short distance of cesspools.

* 294: 4.—Small-pox was imported by a sailor from Newport.
† 298: 1.—The case of small-pox was landed from H.M.S. "Ganges."
‡ 299: 3.—The deaths from small-pox have been few in proportion to the very large number of persons attacked with the disease. The sanitary arrangements are reported to be very bad.
§ 300: 4.—The fatality from small-pox is subsiding. There is an absence of all proper sanitary arrangements.

* 301. 4.—The origin of the 10 fatal cases of small-pox was traced to direct communication with Plymouth. In most, if not all, of the cases vaccination had been neglected.

† 300. 3.—An outbreak of small-pox was checked by the prompt and combined action of the Local Board of Health and Board of Guardians in providing a small-pox hospital.

‡ 307. 4.—Of the 28 deaths from small-pox, 14 were registered in January, 11 in February, and 3 in March.

§ 310. 1.—Of the 6 fatal cases of small-pox 4 occurred in West Coker and 2 in East Coker.

|| 310. 4.—Of the 31 deaths from small-pox 26 occurred in January and 5 in February.

¶ 311. 5.—The fatality from small-pox has ceased.

369: 3.—The 7 fatal cases of scarlet fever occurred in various parts of Caverswall parish.
 369: 3.—The 7 fatal cases of small-pox occurred in the following parishes:—3 in Newhall, 2 in Church Gresley, and 2 in Swadlincote.
 369: 1.—Let fever prevailed in the same locality for a long time previously.
 369: 1.—The fatal case of small-pox took place in a boat on the canal. The disease is now spreading.
 372: 4.—The last death from small-pox was registered on 12th February.
 372: 4.—The small-pox epidemic seems to be disappearing.
 372: 7.—The fatality from small-pox is believed to be declining.
 373: 3.—Of the 61 deaths from small-pox, 15 were registered in January, 13 in February, and 35 in March.
 375: 2: 3.—The population of this sub-district has increased in consequence of the opening of new mines, and the general prosperity of trade.

* 429: 1.—Of the 15 deaths from small-pox, 3 were registered in January, 9 in February, and 3 in March.

† 429: 2.—More than 30 cases of small-pox, of which 4 were fatal, occurred in the village of Carlton.

‡ 430: 4.—A severe outbreak of small-pox has taken place at the hamlet of Stanton Hill.

§ 430: 5.—Small-pox of a most virulent type has prevailed all over the town. The sewage of about 10,000 inhabitants is poured, centre of the town, into a small stream, from which a very bad stench arises.

¶ 433: 3.—Of the 82 deaths from small-pox, 61 occurred in the small-pox hospital.

** 433: 7.—Six deaths from small-pox and 4 from fever occurred in the General Hospital.

*** 436: 2.—The prevalence of small-pox has been greatest in the parishes of Cropwell Bishop, Normanton, and Plumtree.

VII.—NORTH MIDLAND COUNTIES.—REGISTRATION SUB-DISTRICTS.—continued.

* 457: 5.—Of the 8 deaths from small-pox, 6 occurred in the workhouse hospitals.

† 458: 5.—Small-pox broke out again during the quarter, but by prompt action it was suppressed.

‡ 461: 4.—The 5 deaths from fever (typhus and typhoid) all occurred in the fever ward of the workhouse.

§ 462: 1.—Of the 8 deaths from small-pox, 4 occurred in the Union workhouse; the prevalence of the disease is decreasing.

|| 462: 2.—The 3 fatal cases of small-pox occurred in the township of Rumworth.

* 503 : 4.—Of the 44 deaths from small-pox, 10 were registered in January, 15 in February, and 19 in March.

† 507 : 4.—Only 2 of the deaths from small-pox were certified as vaccinated cases.

† 508 : 1.—Of the deaths from small-pox, only 2 were vaccinated cases, while 13 were unvaccinated, and 15 were "not stated" as vaccination.

† 508 : 5.—Of the deaths from small-pox, 61 were stated to be unvaccinated cases. The Registrar states that since 1st January he has been acting as vaccination officer, secured the vaccination of more than 800 children.

† 508 : 6.—Of the deaths from small-pox, 34 were returned as unvaccinated cases.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING MARCH 31ST, 1872.

By JAMES GLAISHER, ESQ., F.R.S., &c., *Secretary of The Meteorological Society.*

The warm weather which set in on December 13th, 1871, following that period of unprecedented cold which ended on the preceding day, continued with very few and very slight exceptions till the 18th day of March. The mean temperatures of the 97 days ending on this day were more than 5° in excess above their averages; the direction of the wind during this time was mostly from the S.W.; this was followed by eight days of severe cold weather, their average daily deficiency was $7\frac{1}{4}^{\circ}$, the direction of the wind was mostly from the North, and snow fell over the country, even to the South Coast, and over the counties of Devonshire and Cornwall. This cold period was very severely felt, owing to its suddenness and great contrast to the long continued high temperature of the preceding 97 days. The mean temperature of the 17th day of March was $9\frac{1}{4}^{\circ}$ in excess above its average, whilst that of the 21st was as much as 12° in defect below its average, and therefore the latter day was $21\frac{1}{4}^{\circ}$ of lower mean temperature than the former. The remaining five days of the quarter were warm. I do not know any instance of so remarkable a cold period as that ending December 12th, 1871, being followed by as remarkable a warm one as that ending March 18th, 1872.

The mean temperature of January was $41^{\circ}3$; since the year 1771 there have been nine Januaries of somewhat higher temperature, viz.,—

The year 1796 was $45^{\circ}3$.	The year 1846 was $43^{\circ}7$.	The year 1853 was $42^{\circ}4$.
" 1804 " $43^{\circ}2$.	" 1851 " $42^{\circ}9$.	" 1863 " $41^{\circ}8$.
" 1834 " $44^{\circ}4$.	" 1852 " $42^{\circ}0$.	" 1866 " $42^{\circ}6$.

The mean temperature of February was $44^{\circ}8$; the instances back to 1771, in which the mean temperature of February has exceeded 44° , are as follows:—

The year 1779 was $45^{\circ}3$.	The year 1809 was $44^{\circ}1$.	The year 1867 was $44^{\circ}7$.
" 1792 " $44^{\circ}7$.	" 1850 " $44^{\circ}7$.	" 1869 " $45^{\circ}3$.

So that in two instances only, viz., in the years 1779 and 1869, has the month of February been warmer than in this year.

The mean temperature of March was $44^{\circ}6$; since the year 1771 the value has been exceeded nine times, viz., in the following years:—

The year 1779 was $47^{\circ}0$.	The year 1822 was $47^{\circ}3$.	The year 1842 was $44^{\circ}9$.
" 1780 " $49^{\circ}2$.	" 1830 " $45^{\circ}8$.	" 1859 " $46^{\circ}4$.
" 1815 " $45^{\circ}0$.	" 1841 " $46^{\circ}2$.	" 1871 " $44^{\circ}9$.

The mean temperature of January and February was $43^{\circ}05$; the mean of these two months in

The year 1796 was $42^{\circ}45$.	The year 1849 was $41^{\circ}65$.	The year 1863 was $41^{\circ}95$.
" 1834 " $42^{\circ}30$.	" 1851 " $41^{\circ}50$.	" 1866 " $41^{\circ}55$.
" 1846 " $43^{\circ}80$.	" 1859 " $41^{\circ}75$.	" 1869 " $43^{\circ}20$.

So that the mean temperature of January and February 1872 has been but twice exceeded in the previous 100 years, viz., in 1846 and 1869.

The mean of the three months ending March 1872 is $43^{\circ}6$, the corresponding mean for the same period in—

The year 1779 was $42^{\circ}4$.	The year 1834 was $42^{\circ}9$.	The year 1851 was $41^{\circ}9$.
" 1819 " $41^{\circ}4$.	" 1846 " $43^{\circ}6$.	" 1859 " $43^{\circ}3$.
" 1822 " $43^{\circ}5$.	" 1849 " $41^{\circ}9$.	" 1863 " $42^{\circ}6$.

So that back for 100 years the warmth of the past three months has been but once equalled, viz., in the year 1846, and has never been exceeded; in two instances there have been closely approximate values, viz., in the years 1822 and 1859.

The average temperature of the first three months in the year, as found from the previous 100 years, is $38^{\circ}6$, and as found from the preceding 31 years is $39^{\circ}6$; the excess of temperature for the quarter over the longer average is therefore 5° , and over that of 31 years is 4° .

The lengthened period of 97 days of warm weather has, however, been exceeded in a few instances. In the year 1821 a warm period set in at the end of October, and continued till the end of April 1822.

In 1833 a warm period began on October 21st, and continued to March 16th, 1834.

In 1858 a warm period set in on December 18th, and extended to April 11th, 1859.

In 1862 a warm period commenced at the beginning of December, and continued to the end of the March following.

The mean temperature of the five months ending March 1822 was $44^{\circ}6$; that ending March 1834 was $43^{\circ}5$, whilst that ending March 1872, owing to the severity of the cold in November and December, was $41^{\circ}3$ only.

The mean temperature of the four months ending March was—

$43^{\circ}8$ in the year 1822.	$42^{\circ}8$ in the year 1863.
$43^{\circ}3$ " 1834.	$42^{\circ}2$ " 1872.
$42^{\circ}7$ " 1859.	

Therefore, remarkable as the quarter has been for its long continued high temperature, there are four instances of a more lengthened period, two of which, viz., in 1821–1822 and 1833–1834, were of nearly five months continuance at this season of the year.

The remarkable fact of this winter is the long continuance of high temperature, following immediately so remarkable a long continuance of weather of low temperature.

The high temperature of the quarter was general; taking the whole country, its mean temperature was $43^{\circ}3$, exceeding that in 1869 by $1^{\circ}4$, that in 1870 by $4\frac{1}{2}^{\circ}$, and that in 1871 by $3\frac{1}{4}^{\circ}$.

The fall of rain in February was only one half of its average, but in January and March it was in excess in both months. The average fall over the country in this quarter exceeded that in the corresponding quarter in 1869 by $2\frac{1}{2}$ inches, in 1870 by 4 inches, and in 1871 by $4\frac{1}{2}$ inches. The monthly pressures of the atmosphere were in defect in each month of the quarter.

On the 1st January the reading of the barometer at the height of 159 feet above sea level was 29·9 in. A decrease set in on this day and lasted till 9h. a.m. on the 5th, the value at that time being 28·87 in.; the mean reading for the 5th was eight-tenths of an inch below the average for the day. From the 6th to the 13th the movements were numerous, rise and fall following each other in rapid succession, but on the 14th an increase to 29·9 in. occurred, followed by a steady decrease to 28·9 in. on the 18th. From this day till the end of the month the mean daily values were with one exception below the average, on occasions the departures were large, notably so on the 23rd and 24th, when the amounts were 1 in. and 1·1 in. respectively. The minimum value on the 24th, 28·21 in., is lower than any since 1843, Jan. 13, when it was 28·096 in., and on 1821, Dec. 24, the minimum reading as recorded at the Royal Observatory, Greenwich, was 27·89 in. Some other instances of low readings are:—1783, March 6, 28·22 in.; 1809, Dec. 17, 28·20 in.; and 1824, Nov. 23, 28·37 in. Two series of meteorological observations are preserved in the Manuscript Room of the Royal Observatory, the one taken at Sion House in Middlesex, the other at Gordon Castle, near Edinburgh. The instances in those journals in which the reading of the barometer has been below 28·3 in., are the following:—

At Sion House, 1791, Jan. 20, 28·10 in.	At Gordon Castle, 1782, Jan. 3, 28·27 in.
" 1809, Dec. 18, 28·30 "	" 1789, Jan. 18, 28·08 "
" 1821, Dec. 25, 28·20 "	" 1791, Jan. 4, 28·22 "
" 1821, Dec. 25, 28·20 "	" 1791, Jan. 17, 28·24 "
" 1821, Dec. 25, 28·20 "	" 1796, Jan. 22, 28·23 "
" 1821, Dec. 25, 28·20 "	" 1798, Nov. 27, 28·23 "
" 1821, Dec. 25, 28·20 "	" 1805, Dec. 21, 28·23 "

The absolute range of readings in January 1872 was 1·8 in.

During February the changes of reading were small throughout, the absolute range in the month being but seven-tenths of an inch; the mean daily values were generally in defect of the average, the greatest departure being 0·46 in.

The principal movements during March were:—An increase to 30·4 in. on the 3d, a decrease to 29·2 in. on the 7th, an increase to 30·2 in. on the 10th, and a gradual decrease, though interrupted frequently by small oscillations, to 29·1 in. on the 30th. The range of reading during March amounted to one inch.

The mean temperature of January was 41°·3, being 5° higher than the average of 101 years higher than the corresponding values in the years 1867–1871, but lower than in 1866 when 42°·6 was recorded.

The mean temperature of February was 44°·8, being 6°·3 higher than the average of 101 years higher than in the corresponding months of 1871 and 1870, but lower than in 1869, the value in that year being 45°·3. There is no other instance in the period 1771–1871 when this value has been exceeded, but in the years 1867, 1850, and 1794, when 44°·7 was registered in each of those years.

The mean temperature of March was 44°·6, being 3°·7 higher than the average of 101 years. In 1871 the corresponding temperature was 44°·9, but no other instance of higher mean temperatures in March is recorded till as far back as 1859.

The mean high day temperatures of January, February, and March were higher than their respective averages by 3°·3, 6°·2, and 3°·9.

The mean low night temperatures of January, February, and March were higher than their averages by 3°·6, 5°·1, and 2°·6 respectively.

Therefore the days and nights in each of the three months were remarkably warm.

NOTE.—In reading this table it will be borne in mind that the minus sign (−) signifies below the average, and that the plus sign (+) signifies above the average.

The daily ranges of temperature were greater than their averages in February and March, but less in January.

The fall of rain was 1·7 in. and 0·5 in. respectively in excess of the average in January and March, but 0·8 in. in defect in February.

The mean temperature of the air in the three months ending February, constituting the three winter months, was 41°·5, being 3°·5 higher than the average of 101 years.

Thunderstorms occurred on the 2d of January at Guernsey; on the 3d at Eccles; on the 4th at Llandudno and Halifax; on the 5th at Guernsey, Osborne, Bournemouth, Portsmouth, Taunton, Lynton, and Oxford; on the 6th at Norwich and Llandudno; on the 8th at Helston and Llandudno; on the 22d at Guernsey; on the 23d at Osborne; and on the 24th at Salisbury. On the 23d of February at Wisbech. On the 1st of March at Holkham; on the 22d at Somerleyton Rectory; on the 24th at Eastbourne; and on the 30th at Stonyhurst and Hawarden.

Thunder was heard, but lightning was not seen, on the 3d of January at Stonyhurst; on the 24th at Truro; and on the 27th at Halifax. On the 23d of February at London and Holkham; and on the 28th at Holkham. On the 8th of March at Allenheads; and on the 21st at Aldershot.

Lightning was seen, but thunder was not heard, on the 2d of January at Oxford; on the 3d at Taunton; on the 4th at Helston and Strathfield Turgiss; on the 5th at Brighton, Strathfield Turgiss, and Cardington; on the 6th at Stonyhurst and Carlisle; and on the 8th at Liverpool. On the 14th of February at Portsmouth and Wilton House; on the 22d at Somerleyton; and on the 23d at Marylebone and Somerleyton. On the 28th of March at Halifax; and on the 30th at Strathfield Turgiss, Cardington, and Halifax.

Solar halos were seen on 13 days during the quarter.

Lunar halos were seen at different places on eight occasions in January, six in February, and eight in March.

Aurora Boreales were seen on the 2d of February at Weybridge; on the 3d at Sidmouth and Brighton; on the 4th all over the country; on the 5th at Brighton; on the 6th at Brighton; on the 11th at Brighton; and on the 23d at Culloden. On the 19th of March at Halifax; and on the 20th at Norwich.

Snow fell in small quantities occasionally in January and February at northern and elevated stations, and from March 20th to the 26th all over the country.

Hail fell on 33 different days, during the quarter.

Fog was prevalent at one or other place on 19 days in January; on 20 in February; and on 15 in March.

Leaf Buds first appeared on the Field Elm on the 28th of February at Chislehurst; on the 3d of March at Strathfield Turgiss and Weybridge Heath; and on the 26th at Carlisle.

Leaf Buds first appeared on the Wych Elm on the 30th of January at Chislehurst.

Leaf Buds first appeared on the Oak on the 24th of March at Weybridge Heath.

Leaf Buds first appeared on the Lime on the 28th of January at Chislehurst. On the 10th of March at Weybridge Heath; on the 20th at Strathfield Turgiss; and on the 31st at Carlisle.

Leaf Buds first appeared on the Sycamore on the 4th of March at Brighton; on the 5th at Weybridge Heath; and on the 12th at Strathfield Turgiss.

Leaf Buds first appeared on the Horse Chestnut on the 28th of March at Carlisle.

Leaf Buds first appeared on the Common Poplar on the 25th of March at Carlisle.

Leaf Buds first appeared on the Hawthorn on the 30th of January at Chislehurst; on the 31st at Eastbourne. On the 12th of February at Weybridge Heath. On the 6th of March at Brighton; on the 15th at Carlisle.

Leaf Buds first appeared on the Hazel on the 1st of March at Strathfield Turgiss.

Leaf Buds first appeared on the Walnut on the 29th of March at Weybridge Heath.

Field Elm in leaf on the 7th of March at Oxford.

Lime in leaf on the 28th of March at Oxford.

Sycamore in leaf on the 19th of March at Helston.

Horse Chestnut in leaf on the 1st of March at Guernsey, on the 7th at Weybridge Heath; on the 13th at Strathfield Turgiss; on the 16th at Helston; on the 27th at Llandudno; on the 28th at Oxford and Culloden; on the 29th at Sidmouth; and on the 30th at Somerleyton Rectory.

Common Poplar in leaf on the 8th of March at Brighton.

Hawthorn in leaf on the 3d of March at Oxford; on the 10th at Guernsey; on the 17th at Brighton; on the 29th at Llandudno; and on the 31st at Osborne.

Hazel in leaf on the 29th of February at Eastbourne.

Rose Bushes in leaf on the 14th of February at Brighton.

Lilac in leaf on the 18th of March at Brighton.

Elder in leaf on the 11th of February at Brighton; and on the 13th at Strathfield Turgiss.

Lilac in blossom on the 12th of January at Strathfield Turgiss; on the 18th at Chislehurst.

Honeysuckle in blossom on the 18th of January at Chislehurst.

Yellow Broom in blossom on the 7th of March at Llandudno.

Primrose in blossom on the 30th of January at Eastbourne.

The Red Flowering Currant in blossom on the 8th of February at Brighton; and on the 26th at Culloden.

Hardy Pear in blossom on the 9th of March at Llandudno; on the 11th at Helston; on the 20th at Chislehurst; on the 24th at Carlisle; on the 26th at Weybridge; on the 28th at Oxford and Culloden; on the 29th at Eastbourne; on the 30th at London; on the 31st at Strathfield Turgiss.

Hardy Apple in blossom on the 20th of March at Helston; on the 30th at Oxford; on the 31st at Eastbourne.

Cherry in blossom on the 14th of March at Brighton; on the 22d at Oxford; and on the 31st at Carlisle.

Plum in blossom on the 7th of March at Strathfield Turgiss; on the 12th at Helston; on the 13th at Oxford; on the 24th at Weybridge Heath; on the 28th at Culloden; and on the 31st at Carlisle.

Rooks began to build on the 22d of March at Brighton.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING MARCH 31st, 1872.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

[illegible]

Year 1872.	Month.	Height of Station above Sea Level.	Names of Stations and Observers.	Pressure of Atmosphere in Month.		Temperature of Air in Month.			Mean Tem- perature.		Vapour. In a cubic foot of Air.	Mean Degree of Humi- dity, Say, = 100.	Mean Weight of a cubic foot of Air.	Maximum in Rays of Sun.	Minimum on Grass.	Mean Reading of a Thermometer.	Wind.				Mean Amount of Cloud.	Rain.

Names of Stations and Observers.

LEAMINGTON (Warwickshire), S. DAWKINS, Esq., F.M.S.

SOMERLEYTON RECTORY (Sussex), Rev. C. J. STEWARD, F.M.S.

NORWICH (Norfolk), C. M. GIBSON, Esq., F.M.S.

WISBECH (Cambridgeshire), S. B. MILLER, Esq., F.R.A.S., F.M.S.

LLANDUDNO (Carmarvonshire), JAMES NICOL, Esq., M.D., and MONA DALTON, Esq., M.D.

DERBY (Derbyshire), JOHN DAVIS, Esq.

NOTTINGHAM (Nottingham), M. O. TARBOTTON, Esq., C.E., F.G.S., F.M.S.

HOLKHAM (Norfolk), JOHN DAVIDSON, Esq., Assistant to the EARL OF LIGSTON.

HAWARTON (Hants), T. NOZAT, Esq., M.D., F.R.A.S.

LIVERPOOL OBSERVATORY, JOHN HARTNUP, Esq., F.R.A.S.

ECCELES, near MANCHESTER, T. MAGRATH, Esq., F.R.A.S., F.M.S.

HALIFAX (Yorkshire), Louis J. CROSSLEY, Esq., F.M.S.

PARK ROAD OBSERVATORY (Halifax, Yorkshire), EDWARD CROSSLEY, Esq., F.R.A.S.

THE PARK, HULL (Yorkshire), Mr. L. FEAR.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	Number of Days on which it fell.	Rain.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 94.]	Marriages — <i>January, February, March, 1872.</i> Births and Deaths — <i>April, May, June, 1872.</i>	[Price 8½ <i>d.</i>
----------	------------------------------------------------------------------------------------------------------------------------	---------------------

*General Register Office, Somerset House,
31st July 1872.*

In the UNITED KINGDOM the *births* of 288,160 children, and the *deaths* of 168,186 persons of both sexes, were registered in the three months ending 30th June 1872. The natural increase of population was thus 119,974.

The registered number of persons married in the quarter ending March 31st, 1872, was 113,344.

The resident population of the United Kingdom in the middle of 1872 is estimated at 31,858,933; that of England and Wales amounting to 23,074,600, of Scotland to 3,397,625, and of Ireland to 5,386,708. The corrected* death-rate of the quarter was 21·2 per 1000; the birth-rate 36·3; and the marriage-rate in the first quarter of the year was 16·3 per 1000.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2195 Registrars in all the districts of England during the quarter ending 30th June 1872; and the MARRIAGES in 13,410 churches or chapels, in 6705 registered places of worship unconnected with the Established Church, and in 626 Superintendent Registrars' offices, in the three months ending 31st March 1872.

The improvement in the prospects of the marriageable population is shown in the increase of weddings in the first quarter of the year, which exceeded the average, and were considerably in excess of the numbers returned in any winter quarter since 1866. The births of the April, May, and June quarter were an average number: the deaths were below the average. Although small-pox still prevailed and whooping-cough was fatal, there was a general abatement of deaths from zymotic disease, and notably from scarlet fever and from fever. Thus the returns present generally favourable results; the community has been comparatively healthy and prosperous. Still much remains to be done in the supply of pure water and of pure air; and in the arrangements for the purification of both town and country.

Marriages.

The number of persons married in the first quarter of the year 1872 was 81,114, or 8,656 more than in the corresponding quarter of 1871. The marriage-rate, which reached its lowest point—12·9 per 1000—in the March quarter of last year,

* In calculating the birth, death, and marriage rates for the United Kingdom, a correction has been made in the Irish Returns—with the authority of the Registrar General of Ireland—for defective registration. The correction is based on the assumption that births, deaths, and marriages bear the same proportion to population in Ireland as in England.

rose this quarter to 14·1, a higher rate than has prevailed in any corresponding quarter since 1866, and '3 above the average rate for the winter quarter in the ten preceding years. A comparison of the number of marriages in each county with the average for the three previous corresponding quarters gives the following results worthy of notice. The greatest increase, in proportion to population, is observed in Monmouthshire, Durham, Northumberland, Northamptonshire, and Warwickshire, and may fairly be attributed to the prosperous condition of the population in those counties employed in coal mines and iron works. Lancashire, Leicestershire, Staffordshire, and the West Riding of Yorkshire show a somewhat smaller but still a considerable increase: while Hertfordshire, Huntingdonshire, Norfolk, Wiltshire, Dorsetshire, Herefordshire, and Lincolnshire, the inhabitants of which are for the most part engaged in agricultural pursuits, so far from sharing in the improvement in the marriage-rate, exhibit a positive decrease in the number of marriages registered.

Births.

In the second or spring quarter of the year 1872, the births of 208,711 children born alive were registered. The increase upon the number registered in the corresponding quarter of the previous year was 7834. The birth-rate was 36·3 per 1000, which is identical with the average rate for the spring quarter in the ten preceding years, but '9 above the rate for the June quarter of 1871. Compared with the average number in the second quarter of the three previous years, the number of births in each of the eleven Divisions showed an increase, such increase being proportionally greatest in the Northern and least in the South-western Division. In the county of Durham the number of births was 15 per cent. above the average; in Dorsetshire it was 2 per cent. below the average.

Increase of Population.

The excess of births over deaths amounted to 87,797 in the three months, being at the rate of 965 per day. This large natural increase of population was, however, to a considerable extent counterbalanced by emigration, 89,213* persons of British origin having sailed during the quarter from ports at which emigration officers are stationed. Of these 89,213 emigrants, 40,423 were English, 9168 Scotch, and 39,622 Irish; in the second quarter of 1871 the number of British emigrants was but 83,399.

Prices, Pauperism, and the Weather.

A slight rise occurred in the price of wheat, the average price per quarter being 56s. 8d. in the three months ending 30th June last, against 55s. 4d. in the previous three months. In the corresponding quarter of 1871 the average price was 59s. 9d.

Potatoes were dear, the average price per ton at the Waterside Market, Southwark, being 137s., or 73s. 6d. per ton higher than at the same period of last year.

The upward tendency in the price of meat still continued. The average prices of beef and mutton, by the carcase, at the Metropolitan Meat Market were 6 $\frac{3}{4}$ d. and 7 $\frac{3}{4}$ d. per lb. respectively, showing a further rise of $\frac{1}{4}$ d. per lb. in each kind of meat upon the high prices which prevailed in the previous quarter.

The returns of pauperism were again favourable, showing a decline in the number both of in-door and out-door paupers. The average number of those receiving in-door relief on the last day of each week in the quarter was 134,412, a smaller number than in any corresponding quarter since 1867, and of those receiving out-door relief 724,463, or less than in any corresponding quarter since 1861.

The weather during the quarter was very changeable; periods of excessive and deficient temperature alternated. The mean temperature in April was 2°·3 in excess of the average in 101 years. In May it was 1°·7 below the average, the nights being especially cold. In June the weather was again warm, the mean temperature being 1° above the average. The mean temperature of the whole

* This information is obtained from a Return with which the Registrar General is favoured by the Emigration Commissioners. The total number of emigrants was 124,127; 34,914 being foreigners. In the numbers here given, 1,469 cases, in which the origin was undistinguished, have been distributed proportionally amongst those in which the origin was stated.

quarter was $52^{\circ}\cdot 8$, or $0^{\circ}\cdot 5$ above the average. The lowest reading of the barometer during the quarter was $28\cdot 9$ in. on 21st April, and the highest $30\cdot 3$ in. on 6th of the same month. Heavy thunderstorms occurred about the middle of June.

The rain-fall of the quarter at Greenwich was $5\cdot 7$ in., and was almost identical with the average in 57 years; of this, one inch fell in April, $3\cdot 1$ in. in May, and $1\cdot 6$ in. in June. The fall in May was almost an inch in excess, while it was below the average in both April and June.

State of the Public Health; Deaths.

ENGLAND.—In the second or spring quarter of 1872, ending 30th June, 120,914 deaths were registered in England and Wales; after making due allowance for increase of population this number showed a decline from those returned in the corresponding periods of the three years 1869–70–71. But for the continued and general fatal prevalence of small-pox the mortality during last quarter would have been unusually low. The annual death-rate was equal to $21\cdot 0$ per 1000 of the estimated population, against $21\cdot 8$, the average rate in the ten previous corresponding quarters; in the second quarters of those ten years 1862–71 the death-rate ranged from $20\cdot 2$ in 1868 to $24\cdot 2$ in 1866.

In the eleven Registration Divisions of England and Wales the annual death-rate last quarter ranged from $17\cdot 0$ and $17\cdot 8$ per 1000 respectively in the agricultural counties of the South-eastern and Eastern Divisions, to $23\cdot 7$ in Yorkshire and $23\cdot 8$ in the North-western counties, Lancashire and Cheshire. The deaths returned in the three months ending June were below the average numbers for the three previous corresponding quarters in London and in Divisions 2, 3, 4, and 5; an excess was, however, shown in the Midland, Northern, and Welsh Divisions, where the greatest fatality from small-pox occurred.

In the chief town districts of England and Wales, comprising a population of 13 millions of persons, the annual death-rate last quarter was equal to $22\cdot 6$ per 1000. In the remaining and principally rural population of about 10 millions, the death-rate did not exceed $18\cdot 9$ per 1000. The urban rate was $0\cdot 8$ and the rural rate $0\cdot 9$ per 1000 below the average rates in the corresponding quarter of the ten years 1862–71. Only twice in these ten years (in 1867 and 1868) was the urban death-rate in the second quarter of the year so low as during the three months ending last June; in the second quarter of 1868 the rural death-rate was $17\cdot 4$ per 1000, but with this exception the rate in this portion of each of the ten years 1862–71 was higher than that which prevailed last quarter.

The 120,914 deaths in England and Wales during last quarter included 27,351 or $22\cdot 6$ per cent. of infants under one year of age, and 28,466 or $23\cdot 6$ per cent. of persons aged 60 years and upwards; each of these proportions showed a slight increase upon those which prevailed in the corresponding quarter of last year. Infant mortality measured by the proportion of deaths under one year of age to births registered was $13\cdot 1$ per cent., against $13\cdot 4$ and $13\cdot 3$ in the two previous corresponding quarters.

The seven principal diseases of the zymotic class caused 19,336 deaths in England and Wales during the three months ending June last, against 18,120 and 21,420 in the second quarters of 1870 and 1871; of these 19,336 deaths last quarter 6521 were referred to small-pox, 2530 to measles, 2206 to scarlet fever, 475 to diphtheria, 3415 to whooping-cough, 2745 to fever, and 1744 to diarrhoea. It is worthy of remark that, excluding the fatal cases of small-pox, the deaths resulting from these principal zymotic diseases were 12,815 last quarter, against 17,674 and 14,408 in the corresponding periods of 1870 and 1871. The 19,336 deaths from the seven diseases were equal to an annual rate of $3\cdot 4$ per 1000 of the estimated population, against $3\cdot 2$ and $3\cdot 8$ in the two previous corresponding quarters.

Small-pox is still a fatal and prevailing epidemic in England and Wales. During the ten years 1860–69 the annual deaths from this disease ranged from 7684 in 1864 to 1565 in 1869; and the average quarterly number in the ten years was 873. Last quarter the fatal cases were 6521, a decline it is true of 1199 from those in the first quarter of the year, but with one other exception a higher number than were returned in any quarter of the past 31 years; they were equal to an annual rate of $1\cdot 1$ per 1000 persons living. The present epidemic, which was

first severely fatal in London and Liverpool, reached its climax in those town districts early in 1871, since when it has steadily declined; but with few exceptions all the large towns in each of the Registration Divisions have since suffered more or less severely. Norwich and Ipswich have experienced severe epidemics in the Eastern counties; Plymouth, Portsmouth, Southampton, and Dover in the South; Wolverhampton, Nottingham, Leicester, Northampton, and Dudley in the Midland counties; Sheffield, Auckland, Durham, Newcastle-upon-Tyne, Sunderland, and Tynemouth in the Northern counties; and Tredegar, Newport, Merthyr Tydfil, Swansea, and Neath in Monmouthshire and Wales. Each of these places has in turn become, what may be termed, a centre of infection, from which the disease has spread to smaller towns and rural districts within a large radius, until the epidemic has been more or less felt in all parts of England and Wales. The divisional totals of deaths from small-pox last quarter showed a decline upon recent quarterly numbers in all parts of the country except in the South-eastern counties, and in the 6th and 7th Divisions including most of the Midland counties; in each of the other Divisions the maximum fatality from the epidemic would appear to have been passed. Of the 1483 deaths from small-pox in the 6th Division last quarter, 1028 occurred in Staffordshire, including 489 in Dudley, and 344 in Walsall registration Districts; the fatality from the disease was also very severe in the parish of Kingswinford in the District of Stourbridge. The increased fatality in the 7th Division was principally confined to Leicester, Ashby-de-la-Zouch, and Basford Districts; in Ashby-de-la-Zouch the epidemic was most fatal in Whitwick sub-district, which, it will be remembered, suffered from a severe epidemic of enteric fever during the summer of 1871; of 154 deaths from small-pox in Basford District, 44 occurred in Greasley sub-district, and no less than 81 in the parish of Bulwell, which at the recent Census did not contain a population of more than 4276 persons. In South Wales the epidemic showed increased prevalence last quarter, especially in Pontypridd and Merthyr Tydfil Districts, in which 419 fatal cases were reported, against 241 in the first quarter of the year; the fatality, however, had considerably declined in Neath, and also in the county of Monmouth.

The 2530 deaths referred last quarter to measles in England and Wales showed a slight further increase upon the numbers returned in the corresponding quarters of 1870 and 1871; a large portion of this increase occurred in London and the West Riding of Yorkshire, the disease being very fatal in Bradford; local epidemics of measles also appear to have prevailed in Croydon, Rickmansworth, Alverstokey, and Saltash. Scarlet fever was severely epidemic during 1870, and caused 11,746 deaths in the last quarter of that year, since which the quarterly numbers have rapidly declined, and the 2206 fatal cases returned last quarter were considerably below the number registered in any quarter since the end of 1869; this decline has been general throughout the whole of England and Wales, but the disease was severely epidemic last quarter in Burnley, Dukinfield, and Todmorden, and sharp outbreaks also occurred in many smaller towns and villages, among which may be mentioned Cranbrook, St. Albans, Handborough (Oxon), Wolverton, Amptill, Bilston, Boston, and Holyhead; these outbreaks could doubtless be traced to defects in the sanitary condition of these places, which should be discovered and remedied. The fatality from diphtheria, which usually rises or falls with that of scarlet fever, was below the average last quarter. The 3415 deaths referred to whooping-cough, although showing a decline of 1284 from those returned in the preceding three months, showed an excess of more than 1200 upon the number in the second quarter of 1871; the fatality from this disease was general, but the proportionally largest excess occurred in London, where 959 deaths were referred to it against 518 in the corresponding three months of 1871. The deaths from diarrhoea last quarter were lower than in the second quarters either of 1870 or 1871; this was probably due to the moderate temperature which prevailed during May and the greater part of June. From simple cholera, or choleraic diarrhoea, 33 deaths resulted, against 26 in the second quarter of 1871. Concerning the principal zymotic diseases, it only now remains to add a few remarks upon the fatality from the various forms of continued fever in England and Wales last quarter. Mortality from fever affords undeniable evidence of an unsatisfactory

sanitary condition. It is gratifying therefore to find that the deaths referred to fever, which in the second quarters of 1870 and 1871 had been 3524 and 3269, further declined to 2745 last quarter; compared with the numbers in the three months ending 30th June 1871, those returned last quarter showed a decline in each of the Registration Divisions, except the fourth, containing the Eastern counties. In London, where the sanitary superintendence is perhaps somewhat in advance of the greater part of the country, the decline in the death-rate from fever has been rapid and continuous in recent years. Staffordshire, the manufacturing districts of Lancashire and Yorkshire, and the mining population of the Northern counties still, however, show excessive rates from fever. In the sub-district of Ashton-in-Makerfield (Wigan) 12 deaths from fever were returned last quarter, in addition to 14 from measles, raising the total deaths to 87 in a population of 7463 (at the 1871 Census) against an average of 4.5 in the three preceding corresponding quarters. Fever was also exceptionally fatal in Walsall and Bilston, and small local outbreaks occurred at Whitchurch (Hants), Bradford (Wilts), and Camelford. So long as any portion of the country, whether urban or rural, is allowed to remain without the control of intelligent sanitary organization and supervision, will this waste of life from fever, and other forms of zymotic disease, be continually reported. The force of public opinion in recent years has done much to improve the sanitary condition of many of our large towns, in spite of the rapidly increasing difficulties arising from the sewage and water problems; in the smaller towns and villages, however, the same progress has not been made, and it is to their formation into working sanitary districts that we must look for any considerable amelioration in their condition.

During the three months ending 30th June last, 6155 deaths in England and Wales, or 5.1 per cent. of the total deaths, were registered upon the information of the coroners, being inquest cases, against 5807 and 5908 in the second quarters of 1870 and 1871. The deaths referred to different forms of violence during last quarter were 4027, or 3.3 per cent. of the total deaths; in the corresponding period of 1871 the number was 3926, or 3.2 per cent. of the deaths from all causes.

In the large public institutions of England and Wales, including workhouses, hospitals, and lunatic asylums, 11,005, or 9.1 per cent. of the total deaths, were recorded; in the second quarter of 1871 the number of these deaths in institutions was 12,144, or 10.0 per cent. of the total deaths; this decrease principally occurred in the workhouses, and was probably in great measure due to the general decline of pauperism.

EIGHTEEN LARGE ENGLISH TOWNS.—The average annual birth-rate in eighteen of the largest English towns during last quarter was equal to 37.7 per 1000 persons living, or 1.4 per 1000 in excess of the general rate in England and Wales; in the several towns it ranged from 33.4 in Norwich to 44.4 in Salford. The annual rate of mortality was 22.5 per 1000, and slightly lower than that which prevailed in the entire urban population of England and Wales; exclusive of the deaths from small-pox the death-rate would have been but 21.5 per 1000. Among these eighteen towns the lowest death-rates from all causes were 20.4 in Birmingham, and 20.7 in London; the highest rates were 25.9 in Leeds, 27.2 in Manchester, and 27.8 each in Bradford and Leicester. The annual death-rate from the seven principal zymotic diseases averaged 3.9 per 1000 in the eighteen towns, of which 1.0 per 1000 was due to small-pox; this zymotic rate was only 2.2 and 2.4 per 1000 in Newcastle and Nottingham, while it was 4.8 in Liverpool, 5.1 in Bradford, 8.9 in Leicester, and 9.8 in Portsmouth. Whooping-cough and small-pox were the most fatal of these diseases in the eighteen towns last quarter, causing 1631 and 1630 deaths respectively; the fatality from whooping-cough was most excessive in London, Liverpool, and Manchester. The 1630 deaths from small-pox included 582 in London, 214 in Portsmouth, 192 in Leicester, 123 in Sheffield, 109 in Leeds, 94 in Birmingham, and 72 in Bristol. The fatality from the epidemic has been comparatively slight in the three last-mentioned towns, two of which derive great advantage from the services of thoroughly efficient Health Officers. Mr. David Davies, M.R.C.S., the Health Officer for Bristol, in a communication upon the presence of small-pox in that city, deplors

the fact that a considerable sprinkling of unvaccinated persons is continually immigrating into the city from the counties of Devon and Cornwall, where "a strong prejudice against vaccination and in favour of inoculation appears still to exist." Although a certain number of vaccinated persons have died from small-pox in Bristol during the present epidemic, Mr. Davies says that he has seen nothing that has shaken his faith in vaccination; "to insure complete success," however, "it should be repeated once in a lifetime;" he adds, "I have seen no case of variola in a well re-vaccinated person."

Infant mortality last quarter, measured by the proportion of deaths of children under one to births registered, averaged 14.3 per cent. in the eighteen towns, against 13.1 in the whole of England and Wales; this per-centage ranged from 11.6 and 11.9 in Portsmouth and Hull, to 18.2 in Bradford and 18.5 in Liverpool. The proportion of inquest cases registered in these towns averaged 6.6 per cent.; it was but 3.5 and 3.6 in Oldham and Bradford, while it was 7.2 in London, 8.3 in Manchester, 8.7 in Newcastle-upon-Tyne, and 9.7 in Birmingham. The per-centage of deaths from different forms of violence was but 1.0 and 2.4 in Oldham and Sheffield, and ranged upwards to 5.1 in Liverpool, 6.3 in Birmingham, and 6.4 in Newcastle-upon-Tyne. The proportion of deaths registered in large public institutions, which was 17.0 per cent. in the second quarter of 1871, declined to 14.8 per cent. last quarter; it ranged from 5.5 in Oldham, and 7.0 each in Bradford and Leicester, to 16.1 in Wolverhampton, 16.7 in Bristol, and 17.9 in London. The decrease in these deaths in institutions is principally due to two causes—the decline in the fatality from small-pox in these eighteen towns, and to the general decrease of pauperism.

FIFTY OTHER LARGE TOWNS.—The estimated population of fifty large English and Welsh towns, ranking next in population to the eighteen for which weekly returns are published, at the middle of this year is about two millions and a half. The birth-rate in this population averaged 37.6, and the death-rate 23.5 per 1000; the death-rate was one per 1000 higher than that in the eighteen largest towns, nearly the whole of the excess being due to the seven principal zymotic diseases, the rate from which was 4.8 in the fifty towns, while it did not exceed 3.9 per 1000 in the eighteen. The lowest death-rates from all causes among the 50 towns were 15.4 in Oxford, 16.0 in Cheltenham, and 16.4 each in Maidstone and Hastings; the rates exceeding 30 per 1000 were 33.8 in Merthyr Tydfil, 34.2 in Dover, 38.3 in Northampton, 38.9 in Dudley, and 45.7 in Walsall; small-pox was severely epidemic in each of these five towns, and the death-rate from this disease alone was respectively 11.0 in Merthyr Tydfil, 13.9 in Dover, 14.2 in Dudley, 17.6 in Northampton, and 23.9 in Walsall. The fatality from small-pox in the Black Country has been terrible; for instance in the Rowley Regis registration sub-district of 270 deaths from all causes, 144 were referred to small-pox.

LONDON.—Notwithstanding the lingering presence of the small-pox epidemic in the Metropolitan area, the death-rate in the three and a quarter millions of its population was unusually low, only 20.7 per 1000, and lower than in any of the 18 large English towns, Birmingham alone excepted. In the second quarter of the three years 1869-70-71 the London death-rate was 22.2, 22.0, and 23.1 respectively. In the various groups of registration Districts the mortality last quarter, after distribution of the deaths in institutions in proportion to population, was 19 in the West, 21 in the North, 22 in the Central, 22 in the East, and 20 in the South.

To the seven principal zymotic diseases 2983 deaths were referred in London last quarter, of which 959 resulted from whooping-cough, 661 from measles, 582 from small-pox, 304 from fever, 204 from diarrhoea, 202 from scarlet fever, and 71 from diphtheria. The fatal cases of small-pox which were 3241 in the June quarter of 1871, have in the four succeeding quarters steadily declined to 1255, 980, 831, and 582 respectively; the epidemic has not, however, yet died out, for during the 13 weeks ending 29th June, exclusive of those fatal cases recorded in the public institutions, 47 were registered in Poplar, 25 in Bow, 22 in West Hackney, 13 in East Plumstead, and 12 in Kensington Town sub-districts.

Whooping-cough showed an excessive mortality in London last quarter, 959 deaths being referred to this disease, against 518 in the corresponding quarter of last year; the fatal cases of measles were also 446 above the number returned in the second quarter of 1871. On the other hand the deaths referred to scarlet fever, diphtheria, fever, and diarrhœa each showed a considerable decline. The deaths caused by different forms of violence in London continually increase; they were 681 or 4 per cent. of the total deaths last quarter, against 622 or 3.3 per cent. in the same period of last year. The deaths registered in the public institutions situated within the registration area of London last quarter were 3057 or 17.9 per cent. of the total deaths, against 4025 and 21.4 per cent. in the corresponding three months of last year.

HEALTH OF ENGLISH WATERING PLACES.—Following the precedent of recent years, in Table X, p. xiv, will be found the means of ascertaining the state of health prevailing during the second quarter of this year in more than 40 of the seaside and inland watering places to which thousands of the dwellers in towns resort at this season of the year in search of mental relaxation, and a healthy stimulus. A study of the figures in this Table is on the whole eminently satisfactory, as the average death-rate during the three months, in more than a million of persons estimated to be living at those places, did not exceed 18.2 per 1000; the lowest rates were 11.7 in Ramsgate, 11.9 in Leamington, 12.8 in Eastbourne, 12.9 in Folkstone, and 13.9 in Lowestoft; in the early part of the quarter there was a slight outbreak of small-pox in the latter town, but the four other places showed an exceptionally low death-rate from zymotic diseases. The highest death-rates among these watering places last quarter were 23.7 in Southport, 24.3 each in Whitby and Matlock, 27.5 in Anglesey, and 35.6 in Dover; the death-rate from the seven zymotic diseases was equal to 3.4 per 1000 in Whitby, 5.0 in Anglesey, 6.7 in Matlock, and 17.1 in Dover; small-pox was slightly prevalent in Whitby and Matlock, and severely epidemic in Dover; scarlet-fever and diphtheria also caused 10 deaths in Matlock, and the high zymotic rate in Anglesey was caused by the severe prevalence of scarlet-fever in Holyhead. There is good reason for believing that English watering places are healthier in summer than their foreign competitors.

HEALTH OF FOREIGN CITIES.

Official returns are now received with considerable regularity from various authorities abroad; from these the following facts bearing upon the health of Indian and Foreign Cities have been compiled.

INDIAN CITIES.—Calcutta, Bombay, and Madras now prepare and transmit weekly returns, containing many facts bearing upon their sanitary condition. The recently enumerated numbers of the population in Bombay and Madras give reliable value to the figures for those two cities; the same information has not, however, yet come to hand for Calcutta, and it is useless to calculate a rate of mortality upon the population enumerated in 1866. In Calcutta during the 13 weeks ending 8th June 2507 deaths were returned, against 2005 in the second quarter of 1871; no less than 1150 deaths were referred to remittent fever. In Bombay the 5034 deaths in the quarter ending 2d July were equal to an annual rate of 31.2 per 1000 of the recently enumerated population, of which mortality 6.1 per 1000 was caused by small-pox. The deaths in Madras during the 13 weeks ending 14th June were 3307, of which 294 resulted from small-pox; the death-rate from all causes was equal to 33.5 per 1000.

FOREIGN CITIES.—Paris continued comparatively free from the prevalence of zymotic disease during the second quarter of this year; 10,242 deaths from all causes were returned, against 10,287 in the first quarter of the year; the death-rate calculated upon the provisionally estimated population, which is probably overstated, was 23 per 1000. In Brussels 1029 deaths were reported last quarter, exclusive of the deaths of non-residents in public institutions, and the death-rate was equal to 22 per 1000. The returns from Berlin show 8531 births and 6420 deaths for the three months, and annual rates per 1000 of 41 and 31 respectively; 228

deaths were referred to small-pox ; during the last four weeks of June no less than 688 deaths in the city were referred to infantile diarrhoea equal to an annual rate of 10·8 per 1000. In Vienna the annual death-rate for the quarter was 37 per 1000, and the rates from small-pox and diarrhoea 5 and 4 per 1000 respectively. Weekly returns continue to be regularly received from three of the principal Italian cities, Rome, Florence, and Turin. In Rome the death-rate was equal to 34 per 1000, against 43 in the first three months of the year ; the reported birth-rate was so low as 26 per 1000 ; the prevalence of small-pox had declined, but 172 deaths were referred thereto during the quarter, as well as 171 to fever, and 186 to diphtheria and croup. The returns from Florence showed a birth and death-rate equal to 33 and 30 per 1000 respectively. The Turin returns, which are among the best that are received from abroad, both as regards the facts they contain and their arrangement, report a birth-rate of 32·6 and a death-rate of 27·2 per 1000 among the 212,644 persons living in that city.

In New York the 8679 deaths returned in the 13 weeks ending 29th of June gave an annual death-rate of 37 per 1000 ; the epidemic of cerebro-spinal-meningitis caused 485 deaths equal to 2 per 1000, and 457 and 362 deaths were referred to small-pox and scarlet fever, respectively. The remarkable mortality in this city attributed to the direct effect of solar heat did not commence until the first week in July.

Note.—The three months January, February, March, contain 90, in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the calculations, also for the difference between 365 and 365·25 days, and 366 and 365·25 days in leap year.

TABLE VI.—Population; Births, Deaths; Mean Temperature and Rainfall; in the Second Quarter of 1872, in Twenty-one Large Towns.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures in this column, with the exception of those for London and Dublin, are the unrevised numbers enumerated in April 1871, raised to the middle of 1872 by the addition of a year and a quarter's increase, calculated on the rate which prevailed between 1861 and 1871. The London Population is now based upon the number enumerated in April 1871, as revised at the Census office. The population of Dublin is taken as stationary at the number enumerated in April 1871.

† The rates for these years will not be found to correspond with those previously published, as they have been re-calculated on new populations based upon the recently enumerated numbers.

TABLE VII.—Deaths in 18 large English Towns in the 13 Weeks ending 29th June 1872
(Estimated aggregate population in middle of 1872, 6,383,205; viz., 3,311,293 in London, and 3,076,907 in the remaining 17 Towns; see note to Table VI.)

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties. ‡ See page 14, notes.

§ The enumerated population of London in April 1871, as revised at the Census Office, was 3,254,260; the revised numbers for the rest of England and Wales are not yet available.

NOTE.—The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.

riages Registered in the Quarter ending 31st March 1872 in the DIVISIONS, REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS OF ENGLAND. Births and Deaths Registered in the Quarter ending 30th June 1872; Deaths from SMALL-POX, MEASLES, SCARLET FEVER, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE; also INQUEST CASES and DEATHS in PUBLIC INSTITUTIONS in the Quarter ending 30th June 1872 in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and REGISTRATION SUB-DISTRICTS OF ENGLAND—continued.

* The Sub-districts (2195 in number) comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; H indicates that a Workhouse, or in some instances an Industrial School, belonging to another District or Union is included; H indicates Hospital or Infirmary; and L Lunatic Asylum.

† Alterations in the limits of some of the Registration Sub-districts have been made within the period for which the average has been formed. In these cases the deaths entered in the column headed "Average" have been proportioned to the population, and the estimate number distinguished thus †.

‡ The numbers of Births and Deaths, as well as the details given "Under 1 year of age" and the twelve subsequent headings, in this Table for London, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 31st March to 29th June 1872.

* 430: 4.—The epidemic of small-pox which commenced in the hamlet of Stanton Hill has since spread over the greater part of sub-district; its virulence is now abating.

† 431: 1.—Of the 44 deaths from small-pox, 7 were registered in April, 16 in May, and 21 in June.

‡ 431: 4.—Of the 30 deaths from small-pox, 9 occurred at Hucknall and 21 at Bulwell. The prevalence of the epidemic at the latter village has now greatly abated.

§ 433: 7.—The 5 deaths from small-pox occurred in the general hospital.

|| 437: 5.—The fatal cases of fever (typhoid) occurred in a small part of the village of Draycott where it has been prevalent for several months; it is now disappearing.

* 466: 2.—The correct area of this sub-district according to the Ordnance Survey is 1423 acres.

† 468: 6.—Of the 20 fatal cases of scarlet fever, 12 occurred within the limits of the Dukinfield Local Board, and 8 within the borough of Staleybridge.

† 470: 3.—Of the 10 fatal cases of fever, 8 were of the typhoid form, and occurred in the workhouse, 6 of them having been removed thither, after having been attacked with the fever, from a cellar dwelling under the Milnrow schoolhouse, in the sub-district of Butterworth Freehold-side.

VIII.—NORTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1871.	Births Registered in the Quarter ending 30 June 1872.	Deaths Average in Quar- ters ending 30 June in the Years 1869-71. Registered in the Quarter ending 30 June 1872.	The DEATHS in the Quarter are stated by the Registrars to include

* 624 : 2.—The 10 deaths from small-pox occurred in the parish of Llanddeinislen ; of the persons who died, 8 were unvaccinated.

† See note *, p. 13.

‡ 627 : 6.—The fatality from scarlet fever is declining ; the sanitary condition of the sub-district is however still bad.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING JUNE 30TH, 1872.

By JAMES GLAISHER, ESQ., F.R.S., &c., *Secretary of The Meteorological Society.*

The weather at the end of March and till the first week in May was very changeable, there were alternately a few days of warmth, and then a few days of cold, the warm periods preponderating both in duration and in excess of temperature over the defects of temperature and cold. Till May 5th the temperature was in excess to the amount of $2\frac{3}{4}^{\circ}$ on the average daily. From the 6th of May to the 12th of June, with the exception of three or four days of moderate warm weather at the end of May, the weather was cold, the sky mostly cloudy, the nights of low temperature with hoar frost and frequent rain, the average deficiency of daily temperature was $3\frac{1}{2}^{\circ}$. On June 13th a warm period set in, and for some days the weather was fine, bright, and hot, but towards the end of the month it was again changeable, there was an excess of daily temperature above these averages of $3\frac{3}{4}^{\circ}$. Some heavy thunderstorms took place during the hot weather in June 17th, 18th, and 19th of June, principally over the Northern and Midland Counties.

The changeable weather which has thus prevailed nearly throughout the quarter, sometimes warm but frequently cold, till the middle of June, caused all cereal crops to be in a backward state, as they did not receive sufficient warmth and sunshine; their forward state in the early spring was entirely lost through the low temperature and harsh weather in the month of May. Under the influence of the bright sunshine and hot weather about the middle of June, everything progressed satisfactorily and rapidly; at the end of the quarter vegetation generally was about ten or twelve days later than in an average season. The wheat crop was generally in ear or in bloom. The storms in June had laid some and blown off the blossoms in some cases, but only to a small portion of the whole, and it was generally expected the yield would be that of a full average.

The hay crop was spoken of as generally very good, and the heaviest for many years.

The potatoe crop is also spoken of as good and abundant.

The average temperature of these three months differs less than $\frac{1}{4}$ of a degree from the average of the same month in the preceding 30 years.

On the 1st April the reading of the barometer at the height of 159 feet above sea level was 29.3 in. A slight decrease to 29.2 in. occurred on the 2d, but on the same day a decided increase set in, and by the 6th, 30.3 in. was reached. From the 7th to the 15th high values generally were recorded, but on the 16th a depression commenced and lasted till about noon of the 21st, when 28.9 in., the absolute minimum for the month was registered. From this date, with but slight exceptions, increasing values were recorded till the end of the month. The absolute range of reading during April was 1.4 in.

During May the movements were numerous, but not of very great magnitude, the principal being a decrease from 30.2 in. on the 1st to 29.2 in. on the 7th, (though broken by a slight increase on the 5th) and a general increase from 29.4 in. on the 18th to 30.2 in. on the 26th. The range of reading for the month was one inch.

The principal movements during June were a general decrease to 29.3 in. on the 9th, and an increase to 30.1 in. on the 16th. From the 17th the oscillations were numerous, and the mean daily values fluctuated above and below the average in periods of three or four days. The range of reading during the month was but 8 tenths of an inch.

For each of the three months the mean value was 29.7 in., and the departure from average, -0.03 in., -0.05 in., and -0.08 in. respectively.

The mean temperature of April was $48^{\circ}3$, being $2^{\circ}3$ higher than the average of 101 years, higher than the corresponding value last year, but lower than those in 1869 and 1870.

The mean temperature of May was $50^{\circ}9$, being $1^{\circ}7$ lower than the average of 101 years, lower than the temperature in the same month in 1871 and 1870, but higher than in 1869, when $50^{\circ}5$ was recorded.

The mean temperature of June was $59^{\circ}2$, being $1^{\circ}0$ higher than the average of 101 years, $4^{\circ}4$ higher than the corresponding value last year, but $1^{\circ}7$ lower than in 1870.

The mean high day temperatures were $1^{\circ}5$ and $0^{\circ}2$ respectively higher than their averages in April and June, but $2^{\circ}5$ lower in May.

The mean low night temperatures of April were $1^{\circ}5$ higher, of June, the same as, and of May $1^{\circ}6$ lower than their respective averages.

Therefore the days and nights of April were warm, and of May cold, while those of June were of equable temperature.

The daily ranges of temperature were greater than their respective averages in April and June, but less in May.

The fall of rain was 0.7 in. and 0.3 in. respectively in defect of the average in April and June, but 0.9 in. in excess in May.

The mean temperature of the air in the three months ending May, constituting the three spring months, was $47^{\circ}9$, being $1^{\circ}4$ higher than the average of 101 years.

NOTE.—In reading this table it will be borne in mind that the minus sign (—) signifies below the average, and that the plus sign (+) signifies above the average.

Thunderstorms occurred on the 17th of April at Carlisle; on the 22d at Osborne; on the 23d at Strathfield Turgiss, Weybridge, Heath, London, and Norwich; on the 8th at Osborne, Marlborough, Streatley, Oxford, Gloucester, and Norwich; on the 9th at Guernsey, Portsmouth, Worthing, Salisbury, Chislehurst, London, Oxford, Eccles, and Stonyhurst; on the 15th at Oxford and Eccles; on the 20th at Helston; on the 22d at Truro, Wisbech, and North Shields; on the 23d at Helston, Taunton, and Somerleyton; and on the 31st at London. On the 2d of June at Royston and Wisbech; on the 3d at Brighton and Leamington; on the 7th at Helston, Marlborough, Gloucester, Cardington, Halifax, Stonyhurst, and Leeds; on the 8th at London and Stonyhurst; on the 9th at Eccles, Halifax, Stonyhurst, Silloth, and Carlisle; on the 10th at Worthing, Brighton, Leamington, and Silloth; on the 17th at Cardington, Wisbech, Hawarden, Halifax; on the 18th at Guernsey, Helston, Barnstaple, Gloucester, Cardington, Wisbech, Hawarden, Eccles, Halifax, Stonyhurst, Leeds, Silloth, Carlisle, and North Shields; on the 19th at Sidmouth, Taunton, Salisbury, Lymington, Marlborough, Gloucester, Royston, Cardington, Wisbech, Llandudno, Hawarden, Eccles, Cockermouth, and Carlisle; on the 20th at Silloth; on the 24th at Osborne, Strathfield Turgiss, Lymington, Marlborough, Chislehurst, London, Royston, Cardington, Leamington, Wisbech, Hawarden, Eccles, Halifax, Stonyhurst, Leeds, and North Shields; on the 25th at Wisbech, Eccles, Leeds, and North Shields; on the 26th at Salisbury, Wisbech, and Eccles; on the 27th at Stonyhurst and Silloth; and on the 28th at Carlisle.

Thunder was heard, but lightning was not seen, on the 5th of April at Halifax; on the 17th at Allenheads, Halifax, and Cockermouth; on the 18th at Hawarden and Helston; on the 19th at Gloucester; on the 21st at Oxford; on the 22d at Portsmouth and Hawarden; on the 23d at Cardington, Eccles, Halifax, Hawarden, Stonyhurst, and Bywell; on the 24th at Somerleyton, Eccles, Halifax, York, and Allenheads; and on the 26th at Eccles and Miltown. On the 6th of May at Hull; on the 7th at Chislehurst, Royston, Leamington, Somerleyton, Wisbech, Eccles, and Hull; on the 8th at Worthing, Brighton, Chislehurst, Leamington, Somerleyton, Hull, and Silloth; on the 9th at Weybridge, Streatley, London, Somerleyton, Silloth, and Carlisle; on the 10th at Chislehurst; on the 15th at Liverpool, Stonyhurst, Cockermouth, and Carlisle; on the 21st at Hull and Carlisle; on the 22d at Salisbury, Taunton, Gloucester, and Somerleyton; on the 23d at Hull and North Shields; and on the 24th at Worthing, Brighton, and Chislehurst. On the 2d of June at Chislehurst and Cardington; on the 3d at Norwich and Hull; on the 7th at Taunton, and Royston; on the 8th at Llandudno and North Shields; on the 9th at Llandudno and Hull; on the 10th at Royston, Cardington, and Hull; on the 17th at Osborne, London, Oxford, Halifax, Hull, and Stonyhurst; on the 18th at Weybridge, London, Llandudno, Hull, and Cockermouth; on the 19th at Portsmouth, Worthing, Weybridge and Stonyhurst; on the 20th at North Shields; on the 21st at Marlborough and Stonyhurst; on the 24th at Portsmouth, Worthing, Weybridge, Streatley, Oxford, and Gloucester; on the 25th at Halifax; and on the 26th at Cardington and Halifax.

Lightning was seen, but thunder was not heard, on the 17th of April at Carlisle; on the 23d at Stonyhurst; on the 25th at Worthing, Brighton, Chislehurst, Cardington, and Somerleyton; on the 26th at Chislehurst and Somerleyton; and on the 28th at Royston. On the 8th of May at Marlborough; on the 9th at Chislehurst; and on the 16th at Portsmouth. On the 11th of June at Oxford; on the 18th at Oxford, Wisbech, and Llandudno; on the 19th at Truro; on the 24th at Brighton, Weybridge, and Oxford; and on the 27th at London.

Solar halos were seen on the 5th of April at Cockermouth; on the 6th at North Shields; on the 7th at Strathfield Turgiss, Weybridge, and Oxford; on the 9th at Brighton and Oxford; on the 10th at Halifax; on the 12th at Halifax and York; on the 21st at Strathfield Turgiss; on the 22d at Oxford; on the 26th at Oxford; on the 28th at Liverpool; on the 29th at Brighton, Weybridge, and Halifax; on the 30th at Oxford. On the 7th of May at Halifax; on the 12th at Halifax; on the 14th at Brighton; on the 15th at Wisbech; on the 30th at Oxford. On the 1st of June at North Shields; on the 15th at Oxford; on the 21st at Oxford; on the 27th at Oxford; on the 30th at Strathfield Turgiss.

Lunar halos were seen on 12 nights during the quarter.

Aurora Boreales were seen on 9 days in April, on 6 days in May, and on 3 days in June.

Snow fell on 14 days during the quarter, mostly in the North.

Hail fell on 14 occasions in April, on 16 in May, and on 10 in June.

Fog was prevalent at some place on 10 days in April, 6 in May, and 10 in June.

Field Elm in leaf on the 2d of April at Brighton; on the 15th at Hull; on the 20th at Miltown; and on the 27th at Helston.

Wych Elm in leaf on the 6th of April at Chislehurst; on the 15th at Hull; on the 19th at Wisbech; and on the 21st at Somerleyton.

Oak in leaf on the 25th of April at Guernsey; on the 27th at Osborne; and on the 29th at Culloden and Chislehurst. On the 1st of May at Oxford; on the 3d at Wisbech; on the 10th at Strathfield Turgiss; on the 15th at Cockermouth; and on the 16th at Brighton. On the 6th of June at Hull.

Lime in leaf on the 7th of April at Wisbech; on the 8th at Llandudno; on the 13th at Strathfield Turgiss; on the 14th at Chislehurst; on the 15th at Culloden; on the 16th at Guernsey; on the 17th at Somerleyton; and on the 25th at Osborne. On the 2d of May at Brighton; and on the 3d at Hull.

Sycamore in leaf on the 8th of April at Llandudno; on the 13th at Brighton; on the 19th at Helston; on the 23d at Wisbech; and on the 30th at Miltown. On the 4th of May at Strathfield Turgiss; and on the 10th at Hull.

Horse Chestnut in leaf on the 7th of April at Guernsey, on the 9th at Wisbech; on the 13th at Osborne and Brighton; on the 14th at Chislehurst; on the 17th at Helston; on the 22d at Miltown; and on the 28th at Carlisle. On the 10th of May at Hull.

Common Poplar in leaf on the 9th of April at Wisbech; and on the 14th at Helston and Chislehurst. On the 6th of June at Hull.

Hawthorn in leaf on the 1st of April at Miltown; and on the 24th at Carlisle. On the 12th of May at Culloden. In blossom on the 29th of April at Helston.

Hazel in leaf on the 4th of April at Strathfield Turgiss; and on the 5th at Miltown.

Beech in leaf on the 14th of April at Brighton; on the 24th at Culloden; and on the 26th at Osborne.

Apple in blossom on the 1st of April at Llandudno; on the 2d at Wisbech; on the 10th at Hull; on the 12th at Wisbech; on the 13th at Brighton; on the 15th at Miltown; and on the 28th at North Shields. On the 2d of May at Stonyhurst.

Hardy Pear in blossom on the 6th of April at Wisbech; on the 8th at Miltown; on the 10th at Hull; on the 26th at North Shields; and on the 28th at Carlisle.

Cherry in blossom on the 3d of April at Silloth; on the 4th at Miltown; on the 12th at Hull; on the 18th at Carlisle; and on the 27th at North Shields.

Wild Cherry in blossom on the 13th of April at Brighton.

Cherry ripe on the 10th of May at Weybridge.

Plum in blossom on the 1st of April at Miltown; on the 3d at Wisbech; on the 11th at Hull; and on the 18th at Carlisle.

Lilac in blossom on the 12th of April at Helston; on the 14th at Guernsey; on the 17th at Osborne and Llandudno; on the 23d at Strathfield Turgiss, Chislehurst, and Wisbech; on the 24th at Weybridge; and on the 25th at Lampeter. On the 1st of May at Hawarden; on the 4th at Silloth; on the 6th at Miltown; on the 8th at Cockermouth and Carlisle; on the 9th at Hull; on the 10th at Culloden; and on the 21st at North Shields.

Laburnum in blossom on the 16th of April at Guernsey; on the 20th at Helston; on the 28th at Llandudno; on the 29th at Brighton, Weybridge, and Wisbech; and on the 30th at Oxford. On the 1st of May at Hawarden; on the 4th at Silloth; on the 6th at Chislehurst; on the 8th at Weybridge; on the 10th at Hull; on the 13th at Carlisle; and on the 17th at Strathfield Turgiss and Miltown; and on the 24th at North Shields.

Yellow broom in blossom on the 11th of April at Weybridge; on the 17th at Hull; and on the 28th at Miltown. On the 27th of June at Brighton.

White broom in blossom on the 17th of April at Weybridge. On the 8th of May at Chislehurst, Hull, and Miltown.

Mountain ash in blossom on the 27th of April at Weybridge. On the 2d of May at Strathfield Turgiss; on the 8th at Chislehurst; on the 10th at Hull; on the 15th at Miltown; on the 20th at North Shields; and on the 22d at Cockermouth.

Honeysuckle in blossom on the 16th of April at Helston; on the 29th at Chislehurst. On the 18th of June at Hull.

Privet in blossom on the 4th of June at Weybridge; on the 18th at Chislehurst; on the 22d at Strathfield Turgiss; and on the 30th at Hull.

Syringa in blossom on the 17th of May at Weybridge; on the 20th at Chislehurst; and on the 30th at Strathfield Turgiss.

Acacia in blossom on the 18th of June at Chislehurst.

Wheat in ear on the 17th of June at Cardington; on the 19th at Hull; on the 20th at Llandudno; on the 21st at Helston, Hawarden, and Cockermouth. In flower on the 20th of June at Chislehurst; on the 21st at Silloth; on the 24th at Taunton and Weybridge; on the 27th at Cardington; on the 28th at Hawarden; and on the 30th at Helston.

Barley in flower on the 20th of June at Llandudno.

Rye in flower on the 7th of June at Chislehurst.

Oats in flower on the 30th of June at Weybridge.

Cuckoo arrived on the 7th of April at Guernsey; on the 11th at Somerleyton; on the 12th at Osborne; on the 13th at Helston and (near) Brighton; on the 14th at Taunton; on the 15th at South Hill (near) Cardington; on the 18th at Lymington; on the 20th at Weybridge; on the 22d at Truro, Cardington, and Hawarden; on the 24th at Streatley; on the 25th at Llandudno and Miltown; on the 26th at Stonyhurst; on the 27th at Royston, Allenheads, and Silloth; on the 28th at Oxford, Lampeter, Wisbech, and Hull; on the 30th at Carlisle. Departed on the 28th of June from Silloth.

Swallow arrived on the 1st of April at Miltown; on the 11th at Helston; on the 14th at Weybridge and Silloth; on the 18th at Cardington; on the 22d at Carlisle; on the 24th at Truro; on the 25th at Hawarden; on the 27th at Royston, Wisbech, and Hull; on the 29th at Brighton and Oxford.

Nightingale arrived on the 11th of April at Lymington; on the 13th at Osborne, and (near) Brighton; on the 17th at Weybridge, Streatley, and Cardington; and on the 22d at Somerleyton. Departed on the 10th of June from Weybridge.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING JUNE 30TH, 1872.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

Year 1872.	Months.	Height of Station above Sea Level.	Names of Stations and Observers.	Temperature of Air in Month.				Mean Temperature.		Vapour.		Mean Degree of Humidity.		Mean Reading of Thermometer.		Wind.			Mean Amount of Ozone.	Mean Amount of Cloud.	Number of Days it fell.	Rain.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

~~~~~  
By Authority of the Registrar General.  
~~~~~

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 95.] **Marriages**—*April, May, June, 1872.* [Price 8½d.
Births and Deaths—*July, August, September, 1872.*

*General Register Office, Somerset House,
31st October 1872.*

In the UNITED KINGDOM the *births* of 264,232 children, and the *deaths* of 155,160 persons of both sexes, were registered in the three months ending 30th September 1872. The natural increase of population was thus 109,072.

The registered number of persons married in the quarter ending June 30th, 1872, was 124,298.

The resident population of the United Kingdom in the middle of 1872 is estimated at 31,858,933; that of England and Wales amounting to 23,074,600, of Scotland to 3,397,625, and of Ireland to 5,386,708. The corrected * death-rate of the quarter was 20·3 per 1000; the birth-rate 34·5; and the marriage-rate in the second quarter of the year was 16·5 per 1000.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2195 Registrars in all the districts of England during the quarter ending 30th September 1872; and the MARRIAGES in 13,433 churches or chapels, in 6786 registered places of worship unconnected with the Established Church, and in 626 Superintendent Registrars' offices, in the three months ending 30th June 1872.

The marriage rate of the spring quarter of the year has been high, and thus implies that the country has been prosperous. Though the prices of the necessities of life have risen, or rather though the value of money has fallen, it has not interrupted the progress of the workmen engaged in manufactories, mines, and trades, as their wages have also risen. The birth-rate of the three months of July, August, and September exceeded the average of the season; and the death-rate was low both in town and country. So the Public Health is growing more satisfactory, and leads us to hope for still further improvement from more effectual sanitary measures. The disasters of the floods and of excessive rain-falls are more than compensated by the better water supply. Against the consequences of the loss of a portion of the potato crop some provision should be made by the supply of vegetables, or of acids, otherwise scurvy may prevail.

* In calculating the birth, death, and marriage rates for the United Kingdom, a correction has been made in the Irish Returns—with the authority of the Registrar General of Ireland—for defective registration. The correction is based on the assumption that births, deaths, and marriages bear the same proportion to population in Ireland as in England.

Marriages.

In the second quarter of the present year the number of persons married was 100,394, or marriage went on at the annual rate of 17·5 per 1000 living. The increase upon the previous corresponding quarter was 3090 in the number of persons married, and ·4 in the marriage-rate. This increase was unequally distributed amongst the eleven Registration Divisions, the numbers in the North-western and Northern Divisions having largely exceeded their averages for the corresponding quarter in the three previous years, while the excess in the South-eastern and South-western Divisions was very slight. Of the counties, Northamptonshire, Monmouthshire, Bedfordshire, Staffordshire, Durham, Cheshire, Leicestershire, Lancashire, and Westmorland, showed the greatest proportional increase. A decline was exhibited in Berkshire, Buckinghamshire, Cambridgeshire, Devonshire, Herefordshire, and North Wales.

Births.

In the quarter ending 30th September 1872, 201,105 births were registered, or 8119 more than in the September quarter of 1871. The birth-rate was 34·6 per 1000, or 1·0 higher than the rate in the previous corresponding quarter, and ·5 higher than the average rate for the summer quarter in the ten preceding years. In each of the eleven Divisions, except the South-western, the number of births was greater than the average for the third quarter in the three previous years. The greatest excess was again shown in the Northern Division, particularly in the county of Durham. In Essex, also, the births largely exceeded the average.

Increase of Population.

The excess of births over deaths during the 92 days was 82,319, or at the rate of 895 daily. The counteracting force of emigration, however, diminished the effect of this natural increase of population, 56,778* persons of British origin having sailed during the three months from ports at which emigration officers are stationed. Of these 56,778 emigrants, 36,135 were English, 5,309 Scotch, and 15,334 Irish. The destination of 42,060 was the United States, of 9534 British North America, of 3587 the Australian colonies, and the remaining 1597 were distributed amongst other places.

Prices, Pauperism, and the Weather.

There has been for some time a marked general rise of prices. The price of wheat again rose slightly, the average for the three months being 58s. 11*d.* per quarter, against 56s. 8*d.* in the previous three months. In the corresponding quarter of 1871 the average price was 57s. 9*d.*

Potatoes (best Regents) averaged 119s. per ton at the water-side market, Southwark, being 50s. per ton dearer than in the September quarter of last year.

A further rise occurred in the price of meat. The average price of beef, by the carcase at the Metropolitan Meat Market, was 6½*d.*, and of mutton 7½*d.* per lb. In the previous quarter the average prices were 6⅓*d.* and 7⅓*d.* respectively.

Pauperism continued to decline. The returns for the past quarter, when compared with those for the quarter ending 30th September 1871, show a decrease of 5688, or 4·3 per cent. in the average number of in-door paupers, and of 87,495, or 11·4 per cent. in the average number of out-door paupers, relieved on the last day of each week.

The weather during the whole quarter was changeable. The mean temperature in July, notwithstanding a cold period which lasted from the 8th to the 18th, was 3°·4 above the average, the warmest period in the whole quarter being the 11 days from the 19th to the 29th July, during which the average daily excess of temperature was 7°·9. The first half of August was cold and wet, but during the latter part of that month and the early part of September the temperature was higher, though

* This information is obtained from a Return with which the Registrar General is favoured by the Emigration Commissioners. The total number of emigrants was 75,885; 19,057 being foreigners. In the numbers here given, 2,063 cases, in which the origin was undistinguished, have been distributed proportionally amongst those in which the origin was stated.

the weather was unsettled. From the 17th September to the end of the quarter rain fell generally and the daily temperature was deficient. The most remarkable feature of the quarter was the frequency of thunderstorms. In July they were prevalent from the 6th to the 14th, and from the 21st to the end of the month; in August from the 5th to the 12th, and from the 21st to the end of the month; in September from the 2d to the 6th, and from the 19th to the 29th. In consequence of the changeable weather the hay harvest was not completed in July, and the heavy rains and frequent thunderstorms seriously interrupted the progress of the corn harvest in August and September.

The rain-fall of the quarter at Greenwich was only 6·5 inches, and 0·8 in. below the average in 57 years. It was nearly the average in July, exceeded it by 0·3 in. in August, and was 1 in. deficient in September. The rain-fall in the country generally was 10·1 inches; the largest excess occurring in the districts north of latitude 52°. In Salford as much as 16·5 inches fell.

State of the Public Health; Deaths.

In the third or summer quarter of this year, 118,786 deaths were registered; these were 1273 below the average number in the corresponding three months of the three years 1869-70-71, without taking into account the increase of population. The annual death-rate was equal to 20·4 per 1000 of the estimated population, against 21·1 the average rate in the third quarters of the ten years 1862-71; in those years the summer death-rate ranged from 18·0 and 19·9, in 1862 and 1867, to 23·7 in the remarkably hot summer of 1868.

In the eleven Registration Divisions of England and Wales the annual death-rate last quarter ranged from 16·1 and 16·9 per 1000 in the agricultural counties of the South-western and South-eastern Divisions, to 23·9 and 24·0 in the principally manufacturing counties of the York and North-western Divisions.

Among rather more than 13 millions of persons living in the chief town districts of England and Wales the annual death-rate was 23·0 per 1000, while in the remaining and principally rural population of about 10 millions the death-rate did not exceed 17·0 per 1000. The urban rate was 0·8 and the rural rate 0·5 per 1000 below the average rates in the corresponding quarters of the ten years 1862-71. Only in 1862 and 1867 of the above ten years was the English urban death-rate so low during the third quarter of the year as it was in the three months ending September last; the rural rate was lower in the third quarters of 1862, 1867, and 1869 than it was last quarter.

The 118,786 deaths in England and Wales included 36,615 or 30·8 per cent. of infants under one year of age, and 24,250 or 20·4 per cent. of persons aged 60 years and upwards; the proportion of infant mortality was almost identical with that which prevailed in the third quarter of last year, while that of elderly persons showed an increase of 1·1 per cent. To each 100 births registered last quarter 18·2 deaths of children under one year of age were recorded; the proportion was 20·0 and 19·4 per cent. respectively in the corresponding periods of 1870 and 1871.

The seven principal diseases of the zymotic class caused 27,428 deaths, against 33,963 and 31,388 in the third quarters of 1870 and 1871; of the 27,428 deaths, 2953 were referred to small-pox, 1267 to measles, 2423 to scarlet fever, 406 to diphtheria, 2503 to whooping-cough, 3195 to different forms of fever, and 14,681 to diarrhoea. These 27,428 deaths, of which more than half resulted from diarrhoea, principally infantile, were equal to an annual rate of 4·7 per 1000 persons estimated to be living, against 6·0 and 5·5 in the two previous corresponding quarters.

The fatality from diarrhoea, which is directly influenced by the temperature and rain-fall, may be said in the present day to govern the rate of mortality during the summer or third quarter of the year. The fatality from diarrhoea reached its maximum at the beginning of August, somewhat earlier than usual, owing to the hot weather which prevailed at the end of July; the temperature during the latter part of the quarter was below the average, and the fatality from diarrhoea declined

rapidly. The 14,681 deaths reported from diarrhoea during the three months ending September were equal to an annual rate of 2·5 per 1000 persons estimated to be living, against 3·1 and 2·8 respectively in the third quarters of 1870 and 1871. In the 18 large English towns furnishing weekly returns the death-rate from diarrhoea averaged 4·4 per 1000, in the 50 other large towns ranking next in size it was 3·5, and in the whole of England and Wales exclusive of these 68 towns the rate did not exceed 1·5 per 1000. From these figures it is evident that the fatality from diarrhoea is far more excessive in urban than in rural populations; in the agricultural counties of the South-western Division, for instance, the diarrhoeal death-rate was only 0·9 per 1000, while it was 3·9 per 1000, or more than four times as great, in the manufacturing counties of Lancashire and Cheshire forming the North-western Division. According to the proportion which prevailed in 1870, 11,862 or 80·8 per cent. of the total deaths from diarrhoea were of infants under two years of age; these deaths therefore exercised an important influence upon the infant mortality. In presently considering the variations in the death-rate from diarrhoea in the several towns, it will appear that the pre-vailing branches of industry in some of the principal town centres exercise some effect upon this fatality.

To simple cholera, or choleraic diarrhoea, 471 deaths in England and Wales were referred last quarter, against 527 in the corresponding three months of last year; of these 163 occurred in London.

The epidemic of small-pox, which has prevailed so severely since the latter part of 1870, caused no less than 22,907 deaths during the four quarters of 1871, and 7720 and 6521, respectively, in the first two quarters of the present year. During the three months ending 30th September last the fatal cases of this disease further declined to 2953; this reduced number, however, showed a considerable excess, as the average quarterly number during 1870, notwithstanding a marked increase in the last quarter, did not exceed 655. The deaths from small-pox showed a large decrease upon the numbers returned in recent quarters in each of the Registration Divisions, but Oxfordshire, Dorsetshire, and Westmorland are the only counties in which no fatal case was reported in the three months. In Cornwall and Cumberland the deaths from small-pox showed an increase upon those in the preceding three months, owing to a greater fatality in Penzance and Whitehaven. The other principal places in which the mortality from small-pox was still excessive last quarter were Portsmouth, Dover, Ipswich, Dudley, Whitwick, and Ystradyfodwg (Glamorganshire).

The deaths referred to measles, scarlet fever, and diphtheria were below the numbers returned in either of the two preceding corresponding quarters; the fatal cases of whooping-cough, which had been excessive in the first two quarters of the year, declined in the three months ending 30th September, although the 2503 deaths from this disease exceeded the numbers returned in the corresponding quarters of 1870 and 1871. The 3195 deaths referred to different forms of fever, although exceeding by nearly 500 the number in the second quarter of this year, were lower than those in the third quarters of 1870 and 1871, which were 4635 and 3362 respectively. The mortality from fever has considerably declined in England since 1865, when it was at the rate of 1·1 per 1000 persons living; last year it was less than 0·7 per 1000, and the returns for this year show a further considerable decrease. This decline in the death-rate from fever is satisfactory evidence of decided sanitary progress.

The fatality from zymotic diseases is naturally greatest in the large town centres, where it is fostered by over-crowding, impure air, and impure water. In 18 of the largest English towns the annual death-rate from the seven principal diseases of this class (including diarrhoea) was equal to 7·0 per 1000; in 50 other large, but smaller, towns it was 6·1; and in the whole of England and Wales, exclusive of these 68 towns, the rate was only 3·5. It must always, however, be borne in mind that very many of our smaller towns and villages exhibit in their death-returns the results of an unfavourable sanitary condition, which it is to be hoped will, when the sanitary organization contemplated by the recent Public Health

Act shall be completed, stand a fair chance of improvement. Till now many small towns and villages have been entirely without any sanitary authorities, and epidemic diseases have at frequent intervals levied their fatal contributions from the inhabitants, without attracting more than passing local attention. A glance through the sub-district returns in the present Quarterly Return will show that measles was unusually fatal in Brentford and Carnarvon; scarlet fever in Rye (Sussex), Steeple Bumpstead (Essex), Bishop's Castle (Salop), and Aberystwith; St. Austell suffered from whooping-cough, and South Hinksey (Berks) from diphtheria; fever, principally of the enteric type, was fatally prevalent in Liskeard (Cornwall), Hawkesbury (Gloster), Hucknall (Notts), and Ovenden township near Halifax. The most remarkable outbreak of zymotic disease in the quarter was the epidemic of scarlet fever in Oldham, which resulted in 264 deaths within the registration district of that name, including 217 within the municipal borough; the severity of the epidemic has but slightly abated since the end of the quarter.

During the three months 6209 deaths in England and Wales, or 5·2 per cent. of the total deaths, were registered upon the information of the Coroners, against 5526 and 6032 in the corresponding three months of 1870 and 1871. To different forms of violence 4331 or 3·6 per cent. of the total deaths were referred in the three months; in the corresponding period of 1871 the number was 4202, or 3·5 per cent. of the deaths from all causes.

In the large public institutions, including workhouses, hospitals, and lunatic asylums, 9301 or 7·8 per cent. of the total deaths were recorded; this is the lowest number of institution deaths returned in any quarter since the third quarter of 1870, and is doubtless partly due to the marked decline in the fatality from small-pox, which has since the latter part of 1870 considerably swelled the numbers of deaths both in hospitals and workhouses. The decline of pauperism has also doubtless contributed to the decrease in the workhouse deaths.

EIGHTEEN LARGE ENGLISH TOWNS.—In the eighteen large English towns furnishing weekly returns, including London, the average annual birth-rate last quarter was equal to 36·2 per 1000 persons living, and exceeded by 1·6 the rate for the whole of England and Wales; in the several towns the lowest birth-rates were 27·6 and 31·3 in Norwich and Nottingham, the highest 41·9 and 43·8 per 1000 respectively in Salford and Sunderland. When the analysis of the ages and civil condition of the population enumerated in 1871 shall have been completed at the Census Office, it will probably afford some clue to the explanation of this wide divergence between the birth-rates. The annual death-rate during the quarter averaged 24·2 per 1000, and exceeded by 1·2 the rate in the entire English urban population, about 13 millions of persons. The death-rates differed to almost the same extent as the birth-rates; the lowest rates were 21·1 in Bristol, and 21·4 in both London and Wolverhampton; the rates exceeding 30 per 1000 were 30·6 in both Leeds and Hull, 31·9 in Leicester, and 35·1 in Oldham. The annual death-rate from the seven principal zymotic diseases averaged 7·0 in the eighteen towns, and ranged from 4·3, 4·9, 5·0, and 5·3, respectively, in Bristol, Sunderland, Newcastle-upon-Tyne, and London, to 10·7 in Portsmouth, 14·0 in Leicester, and 14·1 in Oldham. Diarrhoea caused 7051 deaths in the eighteen towns, of which more than 80 per cent. were doubtless of infants under two years of age; the annual death-rate from diarrhoea was only 2·2 per 1000 in Bristol, while it ranged upwards to 10·1 in Leicester. A full consideration of the occupations of the population of these towns would probably show some relation between the rate of infant mortality from all causes, including diarrhoea, and the proportion of women employed in factories and workshops; certain it is that the proportion of women so employed in Bristol is very small, while in Leicester very considerable numbers are engaged in the hosiery, lace, and shoe factories in its neighbourhood. Measles and whooping-cough were somewhat prevalent in Liverpool; measles in Bradford, and scarlatina in Birmingham, in addition to the epidemic in Oldham before alluded to. The fatality from different forms of fever in these towns was lower than in recent quarters, and the annual death-rate therefrom, which averaged 0·56 per 1000 in the eighteen towns, ranged from 0·38 in London to

1'38, 1'42, and 1'46 respectively in Hull, Leeds, and Portsmouth. The fatal cases of small-pox in the eighteen towns, which in the two preceding quarters of the year had been 2585 and 1626, further declined to 712 last quarter, and included 237 in London, 167 in Portsmouth, 65 in Birmingham, 63 in Leicester, 47 in Bristol, 41 in Leeds, and 37 in Sheffield; Portsmouth, however, was the only one of these towns in which the disease can be said to have been severely epidemic last quarter.

Infant mortality from all causes, measured by the proportion of deaths under one year of age to births registered, averaged 24·7 per cent. in the eighteen towns, against 18·2 in the whole of England and Wales; this per-centage ranged from 17·6 and 18·0 per cent. in Wolverhampton and Bristol, to 35·3 in Norwich, 36·0 in Hull, and 40·5 in Leicester. The proportion of infant mortality in the third quarter of the year is almost governed by the fatality from diarrhoea. The per-centage of deaths of persons aged 60 years and upwards averaged 15·1 in the eighteen towns; it was but 9·1 in Oldham, owing to the scarlet fever epidemic, and 11·0 in Sheffield, while it was 18·9 in Bristol, and 24·6 in Norwich. The proportion of inquest cases to total deaths in these towns averaged 5·8 per cent.; it was but 2·5 in Leicester and Oldham, in which the usual proportion was disturbed by the high rate of mortality from zymotic diseases, while it was 7·2 in Manchester, 7·3 in Birmingham, and 8·6 in Bristol. The deaths from violence in the eighteen towns were 1386, against 1345 and 1385 in the two preceding quarters of the year. The deaths in large public institutions were 4608 or 12·0 per cent., while in the corresponding quarter of last year the number and proportion of these deaths were 5100 and 12·5 per cent. respectively.

FIFTY OTHER LARGE TOWNS.—In the population of about two millions and a half estimated to be living in fifty large English and Welsh towns, other than the eighteen for which weekly returns are published, the birth-rate last quarter averaged 35·8, and the death-rate 23·0 per 1000; both of these rates were somewhat lower than those which prevailed in the eighteen larger towns. The birth-rates ranged from 22·1 in Bath to 46·2 in Dudley. The lowest death-rates were 14·9 in Devonport, 16·1 in East Stonehouse, 16·3 in Cheltenham, and 16·5 in Maidstone; the death-rates exceeding 30 per 1000 were 30·7 in Wigan, 31·9 in Macclesfield, and 35·6 in Dudley. The excess in the Wigan and Dudley rates is explained by the fatal prevalence of zymotic disease; of diarrhoea in Wigan and small-pox in Dudley. In the District of Dudley no less than 388 fatal cases of small-pox were returned, of which 170 (out of 286 from all causes) occurred in Rowley Regis and 132 in Dudley sub-districts. The annual death-rate from the seven principal zymotic diseases among these fifty towns averaged 6·1 per 1000; it was but 2·1 and 2·3 per 1000 in Hastings and Reading, while in the other towns it ranged upwards to 11·2 in Northampton and 18·3 in Dudley. The diarrhoeal rate was less than one per 1000 in both Merthyr Tydfil and Gosport, and highest, 8·4 and 8·5, in Preston and Wigan. It is worthy of note, as bearing upon the influence of the occupations of the people upon the rate of infant mortality that in most of the mining districts in which but a small proportion of women are employed the mortality from diarrhoea (principally infantile) is very light compared with that which prevails in the manufacturing districts where large numbers of women are employed; for instance, the diarrhoeal rate was 0·8 in Merthyr Tydfil, 1·0 in Newport (Monmouth), 1·8 in Dudley, 2·1 in Swansea, and 3·8 in Tyne-mouth; whereas it was 6·0 in Bolton, 7·7 in Ashton-under-Lyne, 8·4 in Preston, and 8·5 in Wigan. There are, however, exceptions on both sides of the question, and the death-rate from diarrhoea is generally low in both Halifax and Huddersfield. The influence of female labour in factories upon infant mortality is of sufficient importance to demand an independent investigation.

LONDON.—Notwithstanding a considerable fatality from infantile diarrhoea during August, the population of about three and a quarter millions of people living within the Metropolitan registration area was unusually healthy, the death-rate per 1000 being but 21·4, or 2·8 below the average rate in the eighteen large English

towns, with a population of nearly six millions and a half. In the corresponding quarters of the four years 1868-71 the death-rate was 24·6, 24·3, 23·4, and 22·9 per 1000 respectively; in each of the past five summer quarters, therefore, the health has steadily improved, and during last quarter only one of the eighteen towns (Bristol) showed a lower death-rate. In the various groups of registration Districts the mortality after distribution of the deaths in institutions in proportion to population, was 19 in the West, 21 in the North, 22 in the Central, 23 in the East, and 22 in the South.

To the seven principal zymotic diseases 4392 deaths were referred, of which 2849 resulted from diarrhœa, 532 from whooping-cough, 316 from fever, 246 from measles, 237 from small-pox, 158 from scarlet fever, and 54 from diphtheria. These 4392 deaths were equal to an annual rate of 5·3 per 1000 persons living, of which 3·5 was due to diarrhœa, against 3·5 and 3·8 respectively in the summer quarters of 1870 and 1871. In the five groups of Registration Districts this diarrhœal rate only ranged from 3·1 in the West to 4·0 per 1000 in the East. The 316 deaths referred to different forms of fever included 45 which were certified as typhus, 189 as enteric, and 82 as simple continued fever; in the corresponding quarter of last year the fatal cases of fever were 355. The steady decline in the fatality from fever in London has frequently been noted in these returns, and during last quarter the rate of mortality from this form of disease was considerably lower than in any other of the 18 large English towns. The epidemic of small-pox caused but 237 deaths, against 831 and 582 in the two preceding quarters of the year; 116 deaths were recorded in the four principal small-pox hospitals at Hampstead (this hospital is now closed), Islington, Homerton, and Stockwell, and 20 and 10 fatal cases were respectively returned in Bow and Poplar sub-districts. Whooping-cough has shown an excessive fatality throughout this year; the 532 fatal cases last quarter, however, were 427 below the number registered in the preceding three months. The deaths referred to measles, scarlet fever, and diphtheria, on the other hand, were unusually low. The deaths resulting from different forms of violence within the Metropolitan area were 664, against 639 and 681 in the two previous quarters of the year; in the corresponding quarter of last year the violent deaths were 635, and it is to be feared that this class of deaths more than keeps pace with the increase of population. In the thirteen weeks ending 28th September 64 of the deaths from fractures and contusions were caused by horses or vehicles in the streets; while from this class of accident no less than 748 cases of injury and maiming came under the notice of the Police within the London Registration area during the same period. The deaths registered on the information of the Metropolitan Coroners were 1143, or 6·5 per cent. of the total deaths, against 1267 and 1224 in the two preceding quarters. The deaths registered in the public institutions were 2631, or 14·9 per cent. of the total deaths, against 3118, or 16·7 per cent., in the corresponding period of last year, when these deaths were considerably raised by the large numbers recorded in the small-pox hospitals.

HEALTH OF FOREIGN CITIES.

The following facts bearing upon the health of Indian and Foreign Cities have been compiled from official returns which are now regularly received from various authorities abroad.

INDIAN CITIES.—In Bombay the 4635 deaths during the 13 weeks ending 1st October were equal to an annual rate of 29 per 1000 of the recently enumerated population, including 1672 which were referred to remittent fever; in the corresponding quarter of last year the deaths in Bombay were 3712. In Madras 3678 deaths were returned in the 13 weeks ending 27th September, of which 898 resulted from different forms of fever, and 229 from dysentery; the annual rate was equal to 37 per 1000 of the population recently enumerated; the deaths in the third quarter of last year were 3254. The Calcutta returns for the 13 weeks ending 21st September give 2709 deaths as having occurred, against 2682 in the

corresponding quarter of last year ; to remittent fever no less than 1109 of the 2709 deaths last quarter were referred. The Calcutta returns do not give any recent population figures, and only state that the population was 430,000 in 1866 ; this is not now sufficiently reliable for the calculation of the present rate of mortality.

FOREIGN CITIES.—The deaths in Paris during the third quarter of this year were 10,308, and equal to an annual rate of 22·7 per 1000 persons of the provisionally estimated population, which is, however, probably over-stated ; the city was comparatively free from zymotic diseases during the quarter, but 243 deaths were referred to enteric fever, showing a death-rate from this cause of ·54 per 1000, against ·23 in London. In Brussels 1123 deaths were returned last quarter (exclusive of the deaths of non-residents in public institutions) the annual rate being 24·3 per 1000. In Berlin the births were 8494 and the deaths 7529, showing birth and death rates of 41·1 and 36·5 respectively ; enteric fever caused 328 deaths, and the rate of mortality from this form of fever alone was 1·6. The deaths in Vienna (exclusive of those of non-residents occurring in hospitals) numbered 4571, giving a death-rate of 29·5 per 1000 ; of these, 978 were referred to small-pox, the death-rate from this epidemic being 6·3 per 1000. Returns of marriages, as well as of births and deaths, have been received from the three Italian cities, Rome, Florence, and Turin. In Rome the numbers of marriages, births, and deaths were 271, 1660, and 2404 respectively ; the respective rates were 9·0, 27·3, and 39·5 per 1000 ; 362 deaths, equal to a death-rate of 6·0, were ascribed to various forms of fever. The returns from Florence give 348 marriages, 1678 births, and 1488 deaths, showing annual rates of 14·3, 34·2, and 30·3 per 1000 respectively. From Turin 341 marriages, 1615 births, and 1320 deaths are reported, the respective rates being 12·8, 30·4, and 25·0.

In New York 10,110 deaths were returned in the 13 weeks ending September 28th, giving the high death-rate of 43·1 per 1000 ; these 10,110 deaths included 3640 from diarrhoea, which are equal to an annual rate from this cause of 15·5 per 1000, against 3·5 in London. Weekly returns are for the future promised from Philadelphia, the second largest city of the United States, having according to the Census of 1870 a population of 674,022 persons.

TABLES.

TABLE I.—Marriages, Births, and Deaths registered in the Years 1862-72, and in each Quarter of those Years, in England and Wales.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures in this column, with the exception of those for London and Dublin, are the unrevised numbers enumerated in April 1871, raised to the middle of 1872 by the addition of a year and a quarter's increase, calculated on the rate which prevailed between 1861 and 1871. The London Population is now based upon the number enumerated in April 1871, as revised at the Census office. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE VII.—Deaths in 18 large English Towns in the 13 Weeks ending 28th September 1872
(Estimated aggregate population in middle of 1872, 6,388,205; viz., 3,311,298 in London, and 3,076,907 in the remaining 17 Towns; see note to Table VI.)

Rochdale - - - M	37,267	340	196	36·5	21·0†	3·1	{ Castleton within and Wardleworth Sub-districts.
Blackburn - - - M	78,172	861	498	44·1	25·5†	6·5	Blackburn Sub-district.
Preston - - - - M	85,738	892	635	41·6	29·6†	9·5	Preston Sub-district.
IX.—YORKSHIRE.							
Huddersfield - - P†	39,159	333	224	34·0	22·9†	4·8	Huddersfield Sub-district.
Halifax - - - - M	48,893	401	259	32·8	21·2†	3·6	Halifax Sub-district.
York - - - - M	56,663	466	371	32·2	26·2†	6·7	{ Bootham, Micklegate, and Walmgate Sub-districts.
X.—NORTHERN COUNTIES.							
South Shields - - M	79,308	905	504	45·6	25·4	6·7	Entire District.
Gateshead - - - M	50,082	518	341	41·4	27·2	6·1	Gateshead Sub-district.
Tynemouth - - - M	41,368	397	253	38·4	24·9	6·3	{ North Shields and Tynemouth Sub-districts.
Carlisle - - - - M	34,154	274	213	32·1	24·9†	7·4	St. Cuthbert & St. Mary Sub-districts.
XI.—MONMOUTHSH. & WALES.							
Newport (Monmouth) M	30,596	270	152	35·3	19·9†	4·8	Newport Sub-district.
Cardiff - - - - M	67,076	560	353	33·4	21·3†	6·9	Cardiff Sub-district.
Merthyr Tydfil - - P	95,925	919	493	38·3	20·6	4·3	{ Lower and Upper Merthyr Tydfil and Aberdare Sub-districts.
Swansea - - - - M	69,182	701	330	40·5	19·1	3·2	{ Swansea and Llangafelach, and Llansamlet (Neath) Sub-districts.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts in the last column approximately represent, are Municipal or Parliamentary.

* For method of framing these estimates see note * to Table VI.

† These rates of mortality have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

‡ The sub-district of Huddersfield, here taken to represent the town, agrees more nearly with the limits of the old Parliamentary Borough than with those of the new Municipal Borough.

TABLE X.—Annual Death-rate from **Diarrhoea** in ENGLAND, and in 68 LARGE TOWNS, during the THIRTY-SEVEN Quarters of the Years 1870, 1871, and 1872.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in either the principal town or the greater part of the population is located the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties. ‡ See page 14, no. § The enumerated population of London in April 1871, as revised at the Census Office, was 3,254,260; the revised numbers for the England and Wales are not yet available.

NOTE.—The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of diseases, also as to the statements respecting sanitary arrangements, &c. &c.

Marriages Registered in the Quarter ending 30th June 1872 in the DIVISIONS, REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS OF ENGLAND. Births and Deaths Registered in the Quarter ending 30th September 1872; Deaths from SMALL-POX, MEASLES, SCARLET FEVER, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE; also INQUEST CASES and DEATHS IN PUBLIC INSTITUTIONS in the Quarter ending 30th September 1872 in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and REGISTRATION SUB-DISTRICTS OF ENGLAND—continued.

Registration Counties.	Enumerated Population, 1871.	Marriages		Births		Deaths		The DEATHS in the Quarter are stated by the Registrars to include																		
		Average in Quarters ending 30 June in the 3 Years 1869-71.		Average in Quarters ending 30 Sept. in the 3 Years 1869-71.		Average in Quarters ending 30 Dec. in the 3 Years 1869-71.		Deaths of

* The Sub-districts (2195 in number) comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; v indicates that a Workhouse, or in some instances an Industrial School, belonging to another District or Union is included; H indicates Hospital or Infirmary; and L Lunatic Asylum.

† Alterations in the limits of some of the Registration Sub-districts have been made within the period for which the average has been formed. In these cases the deaths entered in the column headed "Average" have been proportioned to the population, and the estimate number distinguished thus †.

‡ The numbers of Births and Deaths, as well as the details given "Under 1 year of age" and the twelve subsequent headings, in this Table for London, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 30th June to 25th September 1872.

* 128: 5.—Whooping-cough was prevalent in all parts of the sub-district.

† 132: 1.—Eleven cases of gastric fever (only one of which proved fatal) occurred in the neighbourhood of Stevenage, and were in a great measure attributable to the use of impure water and to overcrowded cottages.

* 368: 3.—The fatality from small-pox has considerably abated; the last death occurred on 3rd September.

† 372: 7.—The fatality from small-pox is declining, that from scarlet-fever is increasing.

‡ 374: 3 and 4.—Small-pox has almost disappeared from these two sub-districts.

§ 375: 1.—Of the 170 deaths from small-pox, 90 were registered in July, 47 in August, and 33 in September.

|| 375: 2.—The prevalence of small-pox is still decreasing.

¶ 375: 3.—Of the 46 deaths from small-pox 25 occurred in July, 9 in August, and 12 in September.

* 428: 3.—The 7 fatal cases of fever were all described as "typhoid."

† 430: 4.—The small-pox epidemic is now dying out.

† 431: 4.—Of the 16 deaths from fever (typhoid), 15 occurred at Hucknall and one at Nuthall. The fatality appears now to be abating.

† 437: 7.—The 4 deaths from fever (typhoid) occurred at the General Hospital.

* 493: 1.—Small-pox has disappeared from Delph and the neighbourhood.
† 495: 9.—Of the 17 deaths from different forms of fever, 13 were referred to typhoid fever.
‡ 500: 1.—The excess of deaths over births is due to the large number of deaths from the principal zymotic diseases, which show an increase of 104 upon those returned in the previous quarter.

* 619 : 2.—The 11 deaths from scarlet fever occurred in the parish of Llangollen, 10 of them within the district of the Llangollen Local Board.

† 624 : 2.—Small-pox has entirely disappeared from the sub-district, no death from it having taken place since 28th July.

‡ 624 : 3.—Of the 26 deaths from measles, 24 occurred in the town of Carnarvon.

§ See note *, p. 13.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING SEPTEMBER 30TH, 1872.

By JAMES GLAISHER, ESQ., F.R.S., &c., *Secretary of The Meteorological Society.*

The weather during the whole quarter has been changeable, the mean temperature of the first week in July was in excess of the average to the amount of $4\frac{1}{2}^{\circ}$ daily; a cold period began on the 8th, and continued till the 18th, the deficiency of temperature averaged 1° daily; the warmest period in the quarter then set in and continued for 11 days till the 29th, the average excess of temperature daily was $7^{\circ}\cdot 9$. A cold period followed, rain fell copiously and generally the temperature was below its average on every day from July 30th to August 15th, the average daily deficiency was 3° . The weather improved on the 16th but became broken towards the end of the month, and was changeable till the end of the first week in September, with very mild, almost summer-like temperature; in the second week the weather was unsettled, particularly in the north, where a great deal of rain fell, in the south it was finer and but little rain fell; the excess of temperature for the 33 days ending September 17th was $3\frac{3}{4}^{\circ}$ daily; from this day to the end of the quarter the weather was broken, of uncongenial character, rain fell generally, and the daily temperature was on the average deficient by 5° .

The most remarkable feature of this quarter has been the frequency of thunderstorms. In July they were prevalent from the 6th to the 14th, and from the 21st to the end of the month, in August from the 5th to the 12th, and from the 21st to the end of the month, and in September from the 2d to the 6th, and from the 19th to the 29th, and several of the storms on these days have extended over very large areas.

In consequence of the changeable weather the hay harvest was not completed in July. In the south of England reaping began about the 20th of July, and the wheat crops were nearly all secured at the end of August, at this time rather more than one half had been gathered in the midland and northern counties, and in Scotland and Ireland had only just begun.

Both in August and September the heavy rains and frequent thunderstorms very frequently interrupted harvest operations, and at the end of the quarter but little progress had been made either in the north of Ireland or Scotland where operations had been further checked by sleet and snow.

Snow has fallen in Cumberland and Westmorland unusually early, and harvest operations have been delayed.

The accounts of the potatoe crop are bad.

The readings of the barometer during July at the height of 160 feet above sea level were very steady throughout the month, the highest reading being $30\cdot 1$ in. and the lowest $29\cdot 5$ in., thus giving a range of but little more than half an inch. The departures of the mean daily values from the average were but small throughout.

Larger movements were experienced during the earlier portion of August, a tendency being shown, however, to decrease till the 7th when the minimum value for the month ($29\cdot 3$ in.) was registered. After this date increasing values were recorded, and readings close to or at times in excess of 30 in. were recorded, the absolute maximum for the month ($30\cdot 1$ in.) occurring on the 28th. The range of reading during August was $0\cdot 8$ in.

The principal movements during September were:—a decrease to $29\cdot 4$ in. on the third, a general increase to $30\cdot 1$ in. by the 13th, a second decrease to $29\cdot 4$ in. by the 18th, an increase to $29\cdot 8$ in. nearly by the 22d, a sudden decrease to $29\cdot 2$ in. by the 24th, and several other smaller oscillations till the end of the month. The mean daily values were with few exceptions entirely in defect of the average. The range of reading in the month amounted to $0\cdot 9$ in.

NOTE.—In reading this table it will be borne in mind that the minus sign (−) signifies below the average, and that the plus sign (+) signifies above the average.

The mean temperature of July was $65^{\circ}\cdot 0$, being $3^{\circ}\cdot 4$ higher than the average of the preceding 101 years, higher than the corresponding value in 1871 by $3^{\circ}\cdot 3$, but lower than in 1870 by $0^{\circ}\cdot 4$.

The mean temperature of August was $61^{\circ}\cdot 0$, being $0^{\circ}\cdot 2$ higher than the average of 101 years, $3^{\circ}\cdot 8$ lower than in 1871, and of nearly the same value as that recorded in 1870.

The mean temperature of September was $57^{\circ}\cdot 4$, being $0^{\circ}\cdot 9$ higher than the average of 101 years, the same as the corresponding temperature of last year, but $1^{\circ}\cdot 7$ higher than in 1870.

The mean high day temperatures were respectively $4^{\circ}\cdot 1$ and $0^{\circ}\cdot 5$ higher than their averages in July and September, but of the same value in August.

The mean low night temperatures were $0^{\circ}\cdot 6$ and $0^{\circ}\cdot 1$ lower than their respective averages in August and September, but $1^{\circ}\cdot 7$ higher in July.

Therefore the days and nights of July were warm, and those of August and September of tolerably equable temperature.

The daily ranges of temperature were greater than their respective averages in each of the three months.

The fall of rain was $0\cdot 1$ in. and $1\cdot 0$ in. respectively in defect in July and September, but $0\cdot 3$ in. in excess in August.

The mean temperature of the air in the three months ending August, constituting the three summer months, was $61^{\circ}\cdot 7$, being $1^{\circ}\cdot 5$ higher than the average for 101 years.

Thunderstorms occurred on the 6th of July at Guernsey, Helston, Truro, Sidmouth, Chislehurst, London, Gloucester, Cardington, Leamington, and Somerleyton; on the 7th at Truro, Gloucester, Leamington, Llandudno, Hawarden, Liverpool, Eccles, Halifax, Stonyhurst, Cockermouth, Silloth, and Carlisle; on the 9th at Royston, Cardington, and Leamington; on the 11th at Guernsey, Osborne, Portsmouth, Worthing, Brighton, Aldershot Camp, Marlborough College, Chislehurst, Streatley, London, Oxford, Royston, Cardington, Holkham, Eccles, Hull, Leeds, Cockermouth, Allenheads, Silloth, Carlisle, Bywell, and North Shields; on the 12th at Royston, Somerleyton, Norwich, Wisbech, Liverpool, Eccles, Halifax, Stonyhurst, Bradford, Leeds, Cockermouth, Silloth, Carlisle, and Miltown; on the 13th at Worthing, Salisbury, Aldershot Camp, Strathfield Turgiss, Marlborough College, London, Oxford, Royston, Cardington, Leamington, Norwich, and Liverpool; on the 14th at Bywell and North Shields; on the 21st at Guernsey and London; on the 22d at Sidmouth, Osborne, Portsmouth, Worthing, Brighton, Salisbury, Aldershot Camp, Strathfield Turgiss, Lymington, Chislehurst, London, Royston, Cardington, Cockermouth, and North Shields; on the 23d at Worthing, Brighton, Strathfield Turgiss, London, Royston, Cardington, Somerleyton, and Wisbech; on the 24th at Guernsey, Lymington, Chislehurst, Streatley, Royston, Cardington, Wisbech, Liverpool, Eccles, Halifax, Stonyhurst, Cockermouth, and Silloth; on the 25th at Sidmouth, Osborne, Portsmouth, Salisbury, Aldershot Camp, Strathfield Turgiss, Lymington, Marlborough College, Chislehurst, London, Oxford, Gloucester, Royston, Cardington, Leamington, Llandudno, Liverpool, Eccles, Halifax, Stonyhurst, Bradford, Allenheads, Bywell, North Shields, and Miltown; on the 26th at Brighton, Salisbury, Stonyhurst, Cockermouth, Silloth, Bywell, North Shields, and Miltown; on the 27th at Somerleyton, Norwich, and Holkham; on the 28th at Allenheads; on the 29th at Royston, Norwich, Llandudno, Liverpool, Eccles, Stonyhurst, Cockermouth, and Carlisle; on the 30th at Aldershot Camp, Chislehurst, and London; and on the 31st at Holkham. On the 2d of August at Helston, Truro, Worthing, Taunton, Leamington, and Holkham; on the 5th at Wisbech, Holkham, and Hawarden; on the 6th at London, Gloucester, Holkham, Liverpool, Eccles, Halifax, Stonyhurst, and North Shields; on the 7th at Sidmouth, Osborne, Taunton, Salisbury, Aldershot Camp, Strathfield Turgiss, Marlborough College, Chislehurst, Streatley, London, Oxford, Gloucester, Royston, Cardington, Leamington, Wisbech, Llandudno, Holkham, Hawarden, Liverpool, Eccles, Halifax, Stonyhurst, Allenheads, Bywell, and North Shields; on the 8th at Salisbury, Chislehurst, Streatley, Oxford, Cardington, and Eccles; on the 9th at Holkham; on the 10th at Gloucester; on the 11th at North Shields; on the 12th at North Shields; on the 25th at Holkham; on the 26th at Eccles, Hull, Stonyhurst, York, Silloth, and Carlisle; and on the 30th at Holkham, Stonyhurst, Cockermouth, and Silloth. On the 2d of September at Guernsey, and Somerleyton; on the 3d at Guernsey, Helston, Truro, Sidmouth, Osborne, Portsmouth, Worthing, Brighton, Lymington, Llandudno, Holkham, Eccles, Halifax, Stonyhurst, Allenheads, Carlisle, and North Shields; on the 4th at Guernsey, Osborne, Brighton, Salisbury, Barnstaple, Aldershot Camp, Lymington, Marlborough College, Gloucester, Royston, Cardington, Norwich, Wisbech, Llandudno, Hawarden, Liverpool, Eccles, Halifax, Hull, Stonyhurst, Leeds, York, Carlisle, North Shields, and Miltown; on the 5th at Holkham, Silloth, and Carlisle; on the 6th at Carlisle; on the 9th at Eccles, Stonyhurst, and Leeds; on the 19th at Norwich and Holkham; on the 20th at Liverpool; on the 21st at Worthing; on the 23d at Sidmouth; on the 24th at Guernsey, Helston, Osborne, and Hawarden; on the 27th at Cardington; on the 28th at Holkham and Hawarden; and on the 29th at Wisbech, Holkham, and Hawarden.

Thunder was heard, but lightning was not seen, on the 4th of July at Hull; on the 6th at Strathfield Turgiss, Streatley, Royston, Hull, Stonyhurst, and Leeds; on the 8th at Hull; on the 9th at Hull; on the 11th at Halifax and Stonyhurst; on the 12th at Cardington and Allenheads; on the 13th at Portsmouth, Chislehurst, Streatley, London, Somerleyton, and Bywell; on the 14th at Bywell; on the 19th at Cockermouth; on the 22d at Oxford, Gloucester, Llandudno, Liverpool, Halifax, Stonyhurst, Allenheads, Silloth, and Culloden; on the 23d at Portsmouth and Aldershot Camp; on the 24th at London, Llandudno, Hull, Allenheads, and Bywell; on the 25th at Worthing, Brighton, Oxford, Llandudno, and Cockermouth; on the 26th at Strathfield Turgiss, Llandudno, and Culloden; on the 27th at Guernsey, Worthing, Stonyhurst, Cockermouth, Allenheads, and Bywell; on the 28th at Guernsey, Worthing, Cockermouth, and Bywell; on the 29th at Oxford, Halifax, and Allenheads; and on the 30th at Oxford. On the 2d of August at Chislehurst, Streatley, and Allenheads; on the 3d at Hull; on the 5th at Llandudno; on the 6th at Llandudno, Hull, and Bywell; on the 7th at Guernsey, Carlisle, and Culloden; on the 8th at Osborne, Worthing, Gloucester, and Royston; on the 9th at Halifax and Carlisle; on the 12th at Bywell; on the 15th at Bywell; on the 21st at Salisbury; on the 24th at North Shields; on the 26th at Halifax and Allenheads; on the 30th at Eccles; and on the 31st at Streatley and Holkham. On the 3d of September at Streatley, Eccles, and Silloth; on the 5th at Cockermouth.

on the 19th at Streatley, Royston, and Somerleyton; on the 20th at Somerleyton; on the 21st at Llandudno and Hawarden; on the 22d at Llandudno; on the 23d at Llandudno; on the 24th at Llandudno; on the 28th at Carlisle; and on the 29th at Oxford, Eccles, and Hull.

Lightning was seen, but thunder was not heard, on the 6th of July at Portsmouth and Strathfield Turgiss; on the 7th at Cardington; on the 11th at Wisbech; on the 13th at Portsmouth; on the 23d at Portsmouth, Aldershot Camp, Oxford, Gloucester, and Norwich; on the 24th at Portsmouth, Worthing, Brighton, Aldershot Camp, London, Oxford, Llandudno, and Culloden; on the 25th at Portsmouth, Brighton, Strathfield Turgiss, Chislehurst, Oxford, Gloucester, Norwich, and Llandudno; on the 26th at Portsmouth; on the 27th at Worthing, Brighton, and London; on the 28th at Portsmouth and Worthing; and on the 30th at Stonyhurst. On the 2d of August at Guernsey and Portsmouth; on the 5th at Portsmouth, Worthing, Brighton, Oxford, and Cardington; on the 6th at Llandudno, Allenheads, Silloth, and Carlisle; on the 7th at Truro and Worthing; on the 8th at Llandudno and Halifax; on the 9th at York; on the 10th at Carlisle and North Shields; on the 20th at Llandudno; on the 21st at Sidmouth and Worthing; on the 25th at Hull, Stonyhurst, Allenheads, Silloth, and Carlisle; and on the 30th at Helston, Truro, Hawarden, Liverpool, Halifax, Allenheads, Carlisle, and North Shields. On the 3d of September at Portsmouth, Lyngington, Oxford, Cardington, Liverpool, Eccles, Hull, and Leeds; on the 4th at Portsmouth, Taunton, Weybridge, Oxford, Llandudno, Holkham, York, and Silloth; on the 5th at Llandudno; on the 9th at Carlisle; on the 19th at Worthing, Brighton, Salisbury, Strathfield Turgiss, Weybridge, London, Llandudno, and Hawarden; on the 20th at Wisbech, Hawarden, and Hull; on the 21st at Llandudno, Liverpool, Stonyhurst, and Cockermouth; on the 23d at Llandudno and Liverpool; and on the 24th at Portsmouth, Worthing, Brighton, Oxford, Llandudno, Eccles, Hull, Stonyhurst, Cockermouth, and Carlisle.

Solar halos were seen on 6 days in July; on 9 days in August; and on 7 days in September.

Lunar halos were seen on the 19th of July at Brighton; and on the 29th at Marlborough College. On the 15th of August at Portsmouth, Weybridge, and Oxford.

Aurora Boreales were seen on the 1st of July at Brighton; on the 2d at Brighton; on the 7th at Portsmouth; on the 8th at Oxford; and on the 30th at Brighton. On the 1st of August at Brighton; on the 2d at North Shields; on the 3d at Guernsey and Silloth; on the 4th at Culloden; on the 6th at Brighton; on the 8th at Guernsey, Helston, Taunton, Oxford, Llandudno, Hawarden, Silloth, and Culloden; on the 9th at Llandudno and York; on the 10th at Allenheads; on the 13th at Culloden; on the 14th at Brighton, Oxford, Llandudno, Stonyhurst, and Culloden; on the 28th at York; and on the 29th at Brighton. On the 2d of September at Brighton and Cockermouth; on the 3d at Llandudno and Hawarden; on the 4th at Brighton; on the 5th at Brighton and York; on the 6th at York; on the 8th at Eccles; on the 9th at Hawarden, Stonyhurst, York, Cockermouth, and Silloth; on the 17th at Oxford and Silloth; on the 21st at Silloth; and on the 29th at York, Carlisle, and North Shields.

Snow fell on the 21st of September at Hawarden and York; on the 25th on Skiddaw and other mountains near Cockermouth; and on the 24th at Allenheads and on the neighbouring hills of Carlisle.

Hail fell on 8 occasions in July; on 3 in August; and on 8 in September.

Fog was prevalent on 40 days during the quarter; mostly in the north.

Spanish Chestnut in flower on the 25th of July at Culloden.

Lime in flower on the 23d of July at Culloden.

Privat first in blossom on the 12th of July at Carlisle.

Portugal Laurel first in blossom on the 8th of July at Culloden.

Honeysuckle first in blossom on the 5th of July at Culloden.

Cherry ripe on the 2d of August at Helston.

Gooseberry ripe on the 5th of August at Culloden.

Currant ripe on the 1st of August at Culloden.

Strawberry ripe on the 10th of August at Culloden.

Raspberry ripe on the 12th of August at Culloden.

Apricot ripe on the 20th of August at Culloden.

Hardy Apple ripe on the 29th of August at North Shields; and on the 30th at Miltown.

Hardy Pear ripe on the 20th of August at Miltown.

Peach ripe on the 8th of August at Helston. On the 20th of September at Miltown.

Plum ripe on the 4th of August at Helston. On the 4th of September at Miltown.

Wheat in flower on the 1st of July at Helston; and on the 12th at Culloden.

Wheat cut on the 27th of July at Royston; on the 29th at Osborne, Chislehurst, and Cardington; on the 30th at Brighton and Oxford. On the 1st of August at Guernsey; on the 4th at Weybridge; on the 10th at Helston; on the 12th at Llandudno; on the 19th at Carlisle; on the 25th at Miltown; and on the 28th at North Shields. On the 14th of September at Silloth.

Barley in flower on the 10th of July at Culloden.

Barley in ear on the 2d of July at Helston.

Barley cut on the 2d of August, at Weybridge; on the 6th at Llandudno; on the 10th at Guernsey; and on the 12th at Helston and Carlisle.

Rye cut on the 13th of July at Brighton and Chislehurst. On the 26th of August at Culloden.

Oats in flower on the 5th of July at Culloden.

Oats in ear on the 2d of July at Helston.

Oats cut on the 27th of July at Osborne; on the 28th at Helston; and on the 29th at Chislehurst and Oxford. On the 1st of August at Weybridge; on the 19th at Stonyhurst; on the 20th at Guernsey; and on the 30th at Miltown.

Peas cut on the 27th of August at Culloden.

Flax pulled on the 20th of August at Miltown.

Swallow departed on the 22d of August from Oxford. On the 30th of September from Silloth.

Swift departed on the 31st of August from Culloden.

Woodcock arrived on the 27th of September at Helston.

Snipe arrived on the 6th of September at Helston.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING SEPTEMBER 30TH, 1872.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

Year 1872.	Months.	Pressure of Atmosphere in Month.		Temperature of Air in Month.				Mean Tem- perature.		Vapour.		Mean Reading of Thermometer.		Wind.		Mean Amount of Cloud. [illegible]

00,000 inches has been altered to 20,000 inches; and on July 24, 3 h. P.M., 23,880 inches has been altered to 23,880 inches.

NOTE.—*The Barometer Reading, ST. JOHN'S COLLEGE, BATTERSEA, JULY 22d, 3 H. P.M., 29°·020 inches has been reduced to sea level.*
August. WINDY AND HATHY. The values are deduced from 23 days observations, viz.: 9th to 31st.

August.—WEYBRIDGE HEATH. The stages are deduced from the following observations, viz., 1st to 25th.

September. " " " " "
22 days, viz., 9th to 30th.

Second Rain-gauges are placed—

[illegible]

The rain-fall on Beachy Head in April was 0.70 in., in May was 2.21 in., and in June 4.21 in.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	RAIN.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

~~~~~  
By Authority of the Registrar General.

No. 96.] **Marriages**—*July, August, September, 1872.* [Price 8½d.
Births and Deaths—*October, November, December, 1872.*

*General Register Office, Somerset House,
31st January 1873.*

In the UNITED KINGDOM the *births* of 269,676 children, and the *deaths* of 158,564 persons of both sexes, were registered in the three months ending 31st *December* 1872. The natural increase of population was thus 111,112.

The registered number of persons married in the quarter ending *September* 30th, 1872, was 122,212.

The resident population of the United Kingdom in the middle of 1872 was estimated at 31,858,933; that of England and Wales amounting to 23,074,600, of Scotland to 3,397,625, and of Ireland to 5,386,708. The corrected* death-rate of the quarter was 20·4 per 1000; the birth-rate 35·3; and the marriage-rate in the third quarter of the year was 16·2 per 1000.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2195 Registrars in all the districts of England during the quarter ending 31st December 1872; and the MARRIAGES in 13,457 churches or chapels, in 6844 registered places of worship unconnected with the Established Church, and in 626 Superintendent Registrars' Offices, in the three months ending 30th September 1872.

The marriage-rate, which had fallen to a low ebb three years ago, rose after the winter of 1871, and in the last summer quarter ending in September was considerably above the average; the young took a cheerful view of their prospects and many new families were founded by marriages. Births, which had fallen off in 1871, rose again, and exceeded the average number in the year 1872, and notably in its Christmas quarter. The mortality for the year was lower than in any of the last twelve years, and in the Christmas quarter the deaths were only nine in ten of the average number. The reduction of the mortality was greatest in the cold quarters of the year, when the temperature was higher than usual, in the town districts where sanitary improvements have made some progress, and in the sensitive class of acute zymotic diseases. Not only did the population suffer less from small-pox,

* In calculating the birth, death, and marriage rates for the United Kingdom, a correction has been made in the Irish Returns—with the authority of the Registrar General of Ireland—for defective registration. This correction is based on the assumption that births, deaths, and marriages bear the same proportion to population in Ireland as in England.

but also less from measles and diphtheria. Whooping-cough showed some inclination to activity, but fever declined, and scarlet-fever, the plague of the young, failed to reap its accustomed harvest of children. The sickness from these diseases probably declined nearly as much as the deaths. The higher night temperature and the abundant rain-fall undoubtedly contributed to the diminution of the death-toll of the kingdom.

Marriages.

In the quarter ending 30th September 1872, 99,612 persons were married, or 6340 more than in the corresponding quarter of 1871. The annual rate was 17·1 per 1000 against 16·3 in the September quarter of 1871, the latter rate agreeing with the average for the third quarters of the ten years 1862–71. The mining districts of Durham and Monmouthshire, as was to be expected, again showed the greatest proportional increase upon the average number of marriages for the three previous corresponding quarters. In Huntingdonshire, Essex, Bedfordshire, Northumberland, Cumberland, Staffordshire, and the extra-metropolitan part of Middlesex, the increase was also large. The marriages in Wiltshire and Herefordshire were 11 and 14 per cent. respectively below the average for the third quarters of the three previous years. The counties of Kent (extra-metropolitan), Sussex, Dorset, Somerset, Worcester, Rutland, and Westmorland also exhibited a decrease. In London the increase was equal to 9 per cent.

Births.

The births registered in the quarter ending 31st December last were 206,093, exceeding the number in the fourth quarter of 1871 by 12,600. The birth-rate, 35·4, was higher than in any previous corresponding quarter, and 1·4 above the average rate for the December quarter in the ten years 1862–71. The increase over the average for the three previous corresponding quarters was again much greater in Durham than in any other county; of the remaining counties the largest increase was shown in Warwickshire and Lancashire. Shropshire was the only county in which the births were below the average, but the increase in Devonshire, Herefordshire, and Lincolnshire was very slight. The average birth-rate in the eighteen towns furnishing weekly returns was 37·3, or 1·9 above the rate for the whole of England and Wales. In London the rate was only 35·1. Four others of these towns showed lower birth-rates, the lowest being 32·5 in Norwich. In all the thirteen other towns the rates exceeded the general rate for England and Wales, the highest rate being 48·2 in Sunderland. In the fifty towns ranking next in order of magnitude the average birth-rate was 37·2 per 1000, or nearly the same as in the eighteen towns; the rates in the several towns ranging from 25·8 in Bath and 26·2 in Cheltenham, to 49·5 in Gateshead and 51·7 in Wigan.

Increase of Population.

In consequence of the high birth-rate and the low death-rate in the quarter, the natural increase of the population was large, the excess of births over deaths amounting to 88,720. Emigration, however, was also more active than is usual in the last quarter of the year, 37,855* persons of British origin having sailed during the three months from ports at which emigration officers are stationed, against 30,753 in the last quarter of 1871. Of these 37,855 emigrants, 25,032 were English, 3144 Scotch, and 9679 Irish. The destination of 26,716 was the United States, of 2311 British North America, of 5712 the Australian colonies, and the remaining 3116 were distributed amongst other places. Since 1868 English and Scotch emigrants have increased so as greatly to exceed the Irish in number.

Prices, Pauperism, and the Weather.

The high prices of the principal necessities of life were still maintained. Wheat averaged 57s. 3d. per quarter, or 1s. a quarter more than in the corresponding

* This information is obtained from a Return with which the Registrar General is favoured by the Emigration Commissioners. The total number of emigrants was 52,647; 14,792 being foreigners. In the numbers here given, 1606 cases, in which the origin was undistinguished, have been distributed proportionally amongst those in which the origin was stated.

period of 1871. The average price per ton of potatoes (best Regents) at the Waterside market, Southwark, was 170s. or nearly double the average price in the three months ending 31st December 1871. Beef was slightly dearer and mutton slightly cheaper than in the previous quarter. The average price of beef by the carcass at the Metropolitan meat market last quarter was 6 $\frac{8}{d}$. and of mutton 7 $\frac{3}{d}$. per lb. In the quarter ending 30th September the average prices per lb. were 6 $\frac{3}{d}$. and 7 $\frac{3}{d}$., while in the December quarter of 1862 they were 5 $\frac{1}{d}$. and 6d. respectively.

The returns of pauperism again showed a considerable decline, compared with those for the December quarters of 1870 and 1871. The average number of in-door paupers relieved on the last day of each week during the quarter was 138,648 and of those receiving out-door relief 675,598, or 6 and 29 per 1000 respectively of the total population. In the previous corresponding quarter the numbers were 140,955 and 758,474 respectively; the decrease of in-door paupers being equal to 1·7 per cent. and of out-door paupers to 12·3 per cent.

Till the 24th October the weather was cold, the average deficiency of daily temperature being 3 $\frac{3}{4}$ °. Then followed a warm period till the 9th November, with about an equal average-daily excess of temperature. From the 10th to the 19th November was a cold period during which the average daily deficiency was 5 $\frac{1}{4}$ °. A period of 14 days warm weather succeeded, in which the average daily excess was 6°, followed by 16 days of changeable weather from the 3d to the 19th December, after which an extraordinarily warm period set in on the 20th, and continued to the end of the year. During this last period the average daily excess of temperature was more than 9°. The mean temperature in the whole quarter was 45°·3, or 1°·7 above the average of 101 years. In October it was 1°·8 in defect, and in November and December 3°·0 and 3°·8 respectively in excess. The most remarkable feature of the weather during the quarter was the frequency and abundance of rain. Rain fell at Greenwich on 67 out of the 92 days, a greater number than in any previous corresponding period since 1815. In Guernsey rain fell on 80 days, and at Stonyhurst in Lancashire on every day in the three months except two. The total fall was large, amounting at Greenwich to 11·32 inches, a quantity which has only once been exceeded during the corresponding period in the last 57 years, namely in 1821, when the fall was 11·47 inches. Last quarter between latitudes 50° and 51° the rainfall averaged about 16·5 inches, and 15·5 inches between latitudes 54° and 55°. The excess over the average of 57 years was 1·5 inches in October, 0·6 in November, and 2·1 in December.

State of the Public Health; Deaths.

In the fourth or autumn quarter of last year 117,373 deaths were registered, or 12,180 less than the average number in the corresponding three months of the three years 1869-70-71, uncorrected for increase of population. The annual death-rate was 20·2 per 1000, and 2·2 per 1000 below the average rate in the fourth quarters of the ten years 1862-71. During the 35 years 1838-72 the death-rate in the last three months of the year has only twice been lower than in the quarter ending 31st December last; in 1845 the rate was 19·1, and in 1856 20·0. In the other years of this period the annual death-rate in the December quarter ranged upwards to 24·1 in 1858 and 25·5 in 1846.

In the eleven Registration Divisions the annual death-rate last quarter ranged from 16·2 and 17·8 in the agricultural counties of the South-eastern and South-western Divisions, to 23·8 and 22·5 respectively in the North-western and York Divisions, comprising the manufacturing districts of Lancashire, Cheshire, and Yorkshire.

In the chief town districts, containing a population estimated at rather more than 13 millions, the death-rate was 22·0 per 1000, while in the remaining and principally rural population of about 10 millions the death-rate did not exceed 17·7 per 1000. The urban rate was 3·1, and the rural rate 1·1 per 1000 below their average rates in the corresponding quarters of the ten years 1862-71; in the

December quarters of those years the lowest urban rate was 23·9 in 1867, which was 1·9 above the rate for last quarter, while the rural rate in 1867 was 17·7, and corresponded with last quarter's rate. It is evident that the generally high temperature and abundant rain during the last three months of 1872 exercised a more beneficial influence upon the public health in town than in rural districts. A hard winter is most fatal among the dwellers in towns, who suffer from the extremes of poverty; and abundant rain not only mechanically cleanses the streets and sewers, but purifies the atmosphere and carries off zymotic exhalations which generate disease. Although the remarkably low death-rate in town districts last quarter may be principally due to the somewhat unusual meteorological conditions which prevailed, it may be safe to assume that a portion of the improvement in their health is permanent, and is the result of the general awakening to the importance of sanitary measures which has been so conspicuous in the last few years.

The meteorological influence on the mortality at different ages appears to have been unequal. Of the total deaths 24·0 per cent. were of infants under one year of age, and 25·4 per cent. of persons aged 60 years and upwards; hence 50·6 per cent. were of children and adults between one and 60 years of age against 55·1 and 53·2 per cent. respectively in the last quarters of 1870 and 1871. The proportion both of infant mortality and of deaths of elderly persons to the total deaths was larger than in the fourth quarters of either 1870 or 1871. The deaths of infants under one year of age to births registered last quarter were 13·7 per cent., against 14·4 and 15·7 in the corresponding periods of the two preceding years. It is evident, therefore, that the largest proportional decrease in the mortality occurred among children and adults between one and 60 years; and from the very marked decline in the fatality from zymotic diseases which must next be noticed, it appears all but certain that the proportional saving of life was greatest among children between one and 10 years of age.

The seven principal diseases of the zymotic class caused only 16,794 deaths, against 25,907 and 26,997 in the fourth quarters of 1870 and 1871; of these 16,794 deaths, 1665 were referred to small-pox, 1341 to measles, 3701 to scarlet fever, 525 to diphtheria, 2182 to whooping-cough, 4023 to different forms of fever, and 3357 to diarrhoea. The deaths from these seven diseases were equal to an annual rate of 2·9 per 1000 of the population against 4·6 and 4·7 in the two previous corresponding quarters. The recent epidemic of small-pox was exceptional, and therefore interferes with the value of these figures for comparison. The deaths reported from measles, scarlatina, diphtheria, whooping-cough, and fever, which were 21,629 and 16,554 in the last quarters of 1870 and 1871, further declined to 11,772 in the three months ending December last. The decline in the fatal cases of these five zymotic diseases from the numbers in the fourth quarter of 1871 was equal to 29 per cent., while the decrease in the deaths from all causes did not exceed 13 per cent.

The fatal cases of small-pox, which had been 7720, 6521, and 2953 in the three first quarters of 1872, further declined to 1665 in the last three months of the year; this was the smallest quarterly number since that in the three months ending December 1870, in which the late epidemic first appeared and caused 1229 deaths. In each of the Registration Divisions, except the South-western, the deaths from small-pox showed a further decline from those in the three preceding quarters of 1872; the 1665 last quarter included 94 in Hampshire, 116 in Cornwall, 292 in Staffordshire, 180 in Worcestershire, 142 in the West Riding of Yorkshire, and 76 in Cumberland, while in the other counties the numbers were comparatively inconsiderable. The following figures point out the principal centres of infection in those counties in which small-pox was fatally prevalent last quarter; the fatal cases in Portsmouth were 85, Helston 62, Penzance 37, Newcastle-under-Lyme 31, West Bromwich 80, Dudley 138, Stourbridge 86, Worcester 54, Rotherham 34, York 31, Cockermouth 21, and Whitehaven 52.

The deaths from measles, scarlet fever, and diphtheria have not recently been so few in any quarter as during the last three months of 1872. The deaths from

measles were 1341 against 1881 and 3763 in the last quarters of 1870 and 1871; those from scarlet fever and diphtheria 4226 against 12,629 and 5133; the fatal cases of fever further declined from 5364 and 4692 to 4023; while those of whooping-cough, although showing a decrease upon the number returned in the last quarter of 1871, somewhat exceeded those in the same period of 1870. Although the fatality from these diseases had generally declined, an examination of this return in detail will show that local outbreaks of more or less severity occurred in different parts of the country; among others the following instances may be noted. Measles was fatally prevalent in Northampton, Banbury, Norwich, Hinckley, and Carnarvon; scarlet fever in Chesham, Salisbury, Fowey, Bath, Bishops Castle, Oswestry, Bilston, Sedgley, Hayfield, Runcorn, Radcliffe, Oldham, Whitehaven, Aberavon, Aberystwith, and Tregaron. Fever frequently shows the greatest proportional fatality in the small towns and villages, and the present return affords many examples of the truth of this fact; it is impossible however here to do more than to name a few of the cases of the prevalence of fever that arrest the attention in glancing through the local returns:—Battle, Wellingborough, Kettering, Barking Town, Wellington (Somerset), Stapleford, Glossop, Rotherham, Kimberworth, Mexbrough, Kirkleatham, and Llanelly. Outbreaks of fever may invariably be regarded as due to the presence of zymotic poison, which it is the duty of sanitary organization to remove.

The deaths from the seven principal zymotic diseases in England and Wales were equal as before stated to an annual rate of 2·9 per 1000 persons living. In the 18 large English towns the rate from these same diseases was 3·4 per 1000, and in 50 other large but smaller towns it was 3·3; in England and Wales, exclusive of these 68 towns, the zymotic rate was 2·6 per 1000. As these 68 towns include most of the densest town centres, and a population of nearly nine millions, the fact that there the zymotic rate so slightly exceeds the rate for the whole of England and Wales is a marked proof of sanitary progress. When the smaller towns, villages, and rural districts shall all have been brought within the influence of sanitary organization the rural rates may again compare as favourably with urban rates, as they did before the recent improvement in the health of large towns was inaugurated.

During the three months 6500 or 5·5 per cent. of the deaths in England and Wales were registered upon the information of the Coroners, against 4·9 and 4·8 per cent. in the corresponding quarters of 1870 and 1871. The deaths referred to different forms of violence were 4117, or 3·5 per cent. of all the deaths; in the corresponding three months of 1871 the violent deaths were 4048, or 3·0 per cent. of the deaths from all causes. In workhouses, hospitals, and lunatic asylums 10,136 or 8·6 per cent. of the total deaths were recorded; the proportion in the corresponding quarters of 1870 and 1871 was 8·4 and 8·6 per cent. respectively.

EIGHTEEN LARGE ENGLISH TOWNS.—In the 18 large English towns for which weekly returns are published, including London, the annual death-rate during the quarter averaged 22·6 per 1000, and exceeded by but 0·6 per 1000 the rate in the entire urban population. The death-rates in these towns differed almost as widely as the birth-rates; in Portsmouth and London the death-rates were so low as 19·5 and 19·8 per 1000, while in the other towns they ranged upwards to 29·2 in Manchester and 35·8 in Oldham. The annual rate from the seven principal zymotic diseases averaged 3·4 per 1000; the lowest rates were 1·7 in Nottingham and 1·9 in London, while the rate was 6·1 in Leeds and Norwich, 6·3 in Birmingham, and no less than 15·5 in Oldham. Small-pox was epidemic in Portsmouth, and somewhat prevalent in Birmingham, Leeds, and Bristol; measles prevailed in Norwich and Liverpool; scarlet fever in Oldham, Birmingham, Manchester, Leeds, and Newcastle-upon-Tyne. The deaths from fever, principally of the enteric form, showed a considerable decline from those returned in the corresponding three months of 1871, and were equal to an annual death-rate of 0·74 per 1000 in the 18 towns, the rates in the several towns ranging from 0·39 and 0·40 in London and Sunderland to 2·0 in Leeds, 2·1 in Sheffield, and 2·4 in

Hull. The fatal cases of small-pox in the 18 towns, which in the first three quarters of the year had been 2585, 1626, and 712, further declined last quarter to 386, of which 131 occurred in London and 84 in Portsmouth.

Infant mortality from all causes, measured by the proportion of deaths under one year of age to births registered, averaged 15·7 per cent. in the 18 towns, against 13·7 in the whole of England and Wales; this per-centage ranged from 12·6 and 13·3 per cent. in Portsmouth and Bristol, to 18·8 and 20·0 in Leicester and Liverpool. Both these great towns have long maintained an unhappy pre-eminence by destroying an excessive number of their infants. The proportion of inquest cases to total deaths in these towns averaged 6·7 per cent. against 5·8 per cent. in the corresponding quarter of 1871, and ranged from 3·5 per cent. in Leicester to 9·0 in Birmingham. The deaths referred to different forms of violence were 1345 against 1286 in the corresponding quarter of 1871. The 4920 deaths in the public institutions showed a decline of 851 from those in the last three months of 1871, when the numbers were raised by the deaths in several temporary Small-pox Hospitals.

FIFTY OTHER LARGE TOWNS.—In the population of about two millions and a half estimated to be living in fifty large English and Welsh towns, other than the 18 for which weekly returns are published, the death-rate last quarter averaged 22·5 per 1000, and was a trifle below the great town rate, 22·6. The lowest death-rates among these 50 towns were 15·3 in Chatham, 15·9 in Cheltenham, and 16·5 in Colchester; the highest were Worcester 26·3, Dudley, Wigan, and Carlisle 26·8, Exeter 27·8, Bolton 28·7, and Bury 29·3. The excess in these high death-rates was due to small-pox in Worcester and Dudley, to scarlet fever in Bury and Bolton, to scarlet fever and whooping-cough in Carlisle, and partly to the prevalence of fever in Exeter. The annual rate from the principal zymotic diseases was below one per 1000 in Hastings and Reading, while it was 6·1 each in Dudley and Carlisle, 6·2 in Bury, and 8·7 in Worcester.

LONDON.—The population of about three and a quarter millions of people living within the Metropolitan registration area was unusually healthy during the three months ending 30th September, and continued to experience a remarkably low death-rate during the last three months of the year, equal to but 19·8 per 1000, and 2·8 below the average rate in the 18 large English towns, containing a population of nearly six millions and a half. In the corresponding quarters of the three years 1869–71 the London death-rate was 26·7, 24·1, and 25·8 per 1000 respectively. Of the 18 towns only Portsmouth during last quarter showed a lower death-rate than London, in which the fever rate was again lower than in any of the towns. In the several groups of registration Districts the mortality from all causes after distribution of the deaths in institutions in proportion to population was 18 in the West, 19 in the North, 20 in the Central, 22 in the East, and 20 in the South.

To the seven principal zymotic diseases 1587 deaths were referred, of which 402 resulted from whooping-cough, 318 from fever, 305 from diarrhoea, 223 from scarlet fever, 138 from measles, 131 from small-pox, and 70 from diphtheria. These 1587 deaths were equal to an annual rate of 1·9 per 1000 persons estimated to be living, or 1·5 below the average rate in the eighteen towns; in the five groups of Registration Districts this zymotic rate was 1·5 in the West, 1·9 in the North, 1·4 in the Central, 2·3 in the East, and 2·1 in the South. The 318 deaths referred to different forms of fever exceeded by two those returned in the preceding three months, and included 220 which were certified as enteric, 35 as typhus, and 63 as simple continued fever. The fatal cases of small-pox which had been 831, 582, and 237 in the first three quarters, further declined to 131 in the last three months of the year; a considerable proportion of these were recorded in the Small-pox Hospitals at Islington, Homerton, and Stockwell; of those occurring out of those institutions, 13 were returned in Poplar, 11 in Lambeth, 9 in Bethnal Green, and 8 in Kensington Districts. Whooping-cough was again the most fatal zymotic disease in London last quarter; the deaths referred thereto, however, showed a further decline of 128 upon those occurring in the preceding

three months. The deaths referred to measles, scarlet fever, and diphtheria were remarkably low throughout the quarter. The average number of deaths registered in London from these seven diseases in the fourth quarters of the ten years 1862-71, after correction for increase of population, was 4095 or 2508 in excess of those returned in the last three months of 1872. The deaths referred to diseases of the respiratory organs and phthisis during the thirteen weeks of last quarter were 5621, against 7704 in the corresponding period of 1871, and were 1120 below the corrected average number in the fourth quarter of the ten years 1862-71. Of these 5621 deaths, 2157 were fatal cases of bronchitis, 1921 of phthisis, and 1073 of pneumonia; in the fourth quarters of the three years 1869-70-71 the deaths in London from bronchitis were 2587, 2373, and 3495 respectively. The deaths from different forms of violence within the Metropolitan area last quarter were 624 against 639, 681, and 664 in the three preceding quarters of the year; of the deaths referred to fractures and contusions, 52 were the result of accidents caused by horses or vehicles in the streets, making the total for the year 213. During the quarter 755 cases of injury and maiming from this class of street accidents came under the notice of the police within the London registration area, against 748 in the preceding three months. The deaths registered upon the information of the Metropolitan Coroners were 1218 or 7.5 per cent. of the total deaths, against 6.3 per cent. in the corresponding period of 1871. In the public institutions of the Metropolis 2782 or 17.0 per cent. of the total deaths were recorded, against 3449 and 16.4 per cent. in the last three months of 1871, when considerably higher numbers were recorded in the small-pox hospitals.

HEALTH OF FOREIGN CITIES.

The following information is derived from returns furnished by various foreign authorities:

In Paris 9642 deaths were returned last quarter. The death-rate was 20.9 per 1000 of the population, which according to the Census of 1872 was 1,851,792, and had increased by 26,518 since 1866. The deaths from phthisis were 2026, or at the rate of 4.4 per 1000 persons living, against 2.3 in London; typhoid fever caused 291 deaths, equal to a rate of .62. In Brussels the deaths were 959, and the equivalent annual rate was 20.9. The returns from Berlin show 8377 births and 5845 deaths, with birth and death rates of 40.6 and 28.4 respectively; the deaths from enteric fever were 561, or at the rate of 2.7 per 1000. The 4955 deaths in Vienna give an annual rate of 32.0 per 1000; 1196 deaths, equal to a rate of 7.7, were due to small-pox, and 448 deaths, equal to a rate of 2.9, were caused by diarrhoea. In Rome the marriages were 356, the births 1887, and the deaths 2119; the respective rates were 11.5, 30.9, and 34.8. In Florence there were 381 marriages, 1759 births, and 1360 deaths, giving marriage, birth, and death-rates of 16.9, 39.0, and 30.2. The returns from Turin show 387 marriages with a rate of 14.7, 1747 births with a rate of 32.9, and 1373 deaths with a rate of 26.0.

In Bombay during the quarter ending 31st December last, 4278 deaths were returned, showing a rate of 26.6 per 1000; of these deaths 1625, giving a rate of 10.1, were referred to remittent fever. In Madras during the quarter ending 13th December the deaths were 3617, and the death-rate was 36.7. In Calcutta the deaths in the quarter ending 14th December were 3845, of which 454 were caused by cholera, and 1539 by remittent fever.

In New York 6224 deaths were reported last quarter, and the equivalent death-rate was 26.5. In Philadelphia, from which returns were first received last quarter, the total deaths were 3037, and the rate was 18.1 per 1000, contrasting favourably with the rates in the eighteen largest towns in England and Wales.

The Year 1872.

In the United Kingdom 1,092,616 births and 665,208 deaths were registered during the year 1872. The excess of births over deaths, according to the registered numbers, was therefore 427,408; but the necessary correction for defective registration in Ireland alters the amount of this excess to 453,349. The corrected birth-rate for the year was 35·7, and death-rate 21·4 per 1000 persons. The number of emigrants of British origin who sailed during the year from ports at which there are emigration officers was 214,386, of whom 120,524 were English, 19,920 Scotch, and 73,942 Irish. The destination of 164,475 was the United States; of 24,396 British North America; of 15,265 the Australian Colonies; and the remaining 10,250 were distributed amongst other places.

In England 824,646 births and 492,065 deaths were registered. The births were 27,503 more and the deaths 23,031 fewer than in 1871. The birth-rate was 35·7 per 1000, or 0·4 above the average rate for the ten years 1862-71; the death-rate was 21·3, or 1·4 below the average. The marriage-rate for the whole year cannot be ascertained until all the returns for the December quarter are received. In each of the first three quarters, however, a considerable increase upon the average rates was shown.

The seven principal zymotic diseases caused 88,652 deaths, of which 18,859 were referred to small-pox; 8259 to measles; 11,715 to scarlet fever; 1992 to diphtheria; 12,799 to whooping-cough; 13,507 to different forms of fever; and 21,521 to diarrhoea. The deaths from whooping-cough showed an increase of 3183 over the number in 1871, but the fatal cases of each of the other six above-mentioned diseases were less numerous. The deaths from small-pox declined 4048, and those from scarlet fever 6567. Inquests were held in 25,059 cases, or 5·1 per cent. of the total deaths; and 16,360 or 3·3 per cent. of the total deaths resulted from violence, that is from accident or negligence, suicide, murder, or manslaughter.

ENGLISH WATERING-PLACES.—A Table of mortality is to a great extent a Table of salubrity, and it has been thought useful to determine the rates of mortality of the population within the sub-districts in which the watering-places of England are situate. (See Table x, p. xiv.) The sub-districts are sometimes extensive, and include parishes or streets differing very much in sanitary condition; and this must be borne in mind in consulting the Table, for it may happen that sub-districts where the mortality is high have parts in them exceedingly healthy.

No correction has been attempted for any excess of deaths among invalids, and as a general rule, little is required; but care has been taken to exclude Hospitals and Lunatic Asylums, which produced a disturbing effect in some places, and led to an over-statement of their mortality; this was especially the case in Malvern.

Of few watering-places abroad do we know the mortality; but looking at their low sanitary condition, it is probably higher than it is in the watering-places of England, which only require the universal application of our recognized sanitary system to make them the healthiest in the world.

TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in the Years **1862-72**, and in each Quarter of those Years, in **England and Wales**.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures in this column, with the exception of those for London and Dublin, are the unrevised numbers enumerated in April 1871, raised to the middle of 1872 by the addition of a year and a quarter's increase, calculated on the rate which prevailed between 1861 and 1871. The London Population is now based upon the number enumerated in April 1871, as revised at the Census office. The population of Dublin is taken as stationary at the unrevised number enumerated in April 1871.

TABLE VII.—Deaths in 18 large English Towns in the 13 Weeks ending 28th December 1872
(Estimated aggregate population in middle of 1872, 6,388,205; viz., 3,311,298 in London, and 3,076,907 in the remaining 17 Towns; see note to Table VI.)

* The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the column approximately represent, are Municipal or Parliamentary.

† For method of framing these estimates see note * to Table VI.

These rates of mortality have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and the Asylums, situate within the districts or sub-districts here taken as representing the town, or by the exclusion or addition of a portion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

The sub-district of Huddersfield, here taken to represent the town, agrees more nearly with the limits of the old Parliamentary Borough with those of the new Municipal Borough.

TABLE X.—Mortality in Districts or Sub-districts containing the principal English Watering Places.

District Number.	WATERING PLACES.	POPULATION, 1872.	DEATHS registered in the Year 1872.	ANNUAL RATE of MORTALITY per 1000 living.			DISTRICTS and SUB-DISTRICTS taken as approximately representing the Watering Places.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

‡ See page 14, note.

NOTE.—The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.

ages Registered in the Quarter ending 30th September 1872 in the DIVISIONS, REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS OF ENGLAND. **Births** and **Deaths** Registered in the Quarter ending 31st December 1872; Deaths from SMALL-POX, MEASLES, SCARLET FEVER, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE; also INQUEST CASES and DEATHS IN PUBLIC INSTITUTIONS in the Quarter ending 31st December 1872 in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and REGISTRATION SUB-DISTRICTS OF ENGLAND—continued.

* The Sub-districts (2195 in number) comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *u* indicates that a Workhouse, or in some instances an Industrial School, belonging to another District or Union, is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† Alterations in the limits of some of the Registration Sub-districts have been made within the period for which the average has been formed. In these cases the deaths entered in the column headed "Average" have been proportioned to the population, and the estimated number distinguished thus †.

‡ The numbers of Births and Deaths, as well as the details given "Under 1 year of age" and the twelve subsequent headings, in this Table for London, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 29th September to 28th December 1872.

I.—LONDON.—REGISTRATION SUB-DISTRICTS.—continued.

Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1871.	Births		Deaths		The DEATHS in the Quarter are stated by the Registrars to include *												
			Registered in the Quarter ending 31 Dec. 1872.	Average in Quar- ters ending 31 Dec. 1872. Dec. in the 3 Years 1869-71.	Registered in the Quarter ending 31 Dec. 1872.	Children under 1 Year of Age. Persons aged 60 Years & upwards.	Deaths from												
							Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping- cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

* 63 : 3.—Of the 6 fatal cases of fever, 3 were described as typhus, and 3 as enteric or typhoid ; 4 occurred in Battle and 2 in Dallington.
† 69 : 3.—Measles has been very prevalent in the town of Eastbourne and in some other parts of the Sub-district, but has now nearly disappeared. The sanitary condition of the town is good.

* 193: 5.—The 3 persons who died from typhoid fever are supposed to have caught it either at Ipswich or coming home in a dredging vessel. No other cases occurred.

† 200: 4.—The 2 deaths from scarlet fever were of children in one family in Little Bardfield parish.

† 202: 2.—The 5 deaths from small-pox were the result of an outbreak of that epidemic (now arrested) in a row of 4 cottages in the parish of Stansfield.

* 296: 1.—Scarlet fever has been very prevalent in St. Blazey parish.

† 299: 1.—Of the 17 deaths from small-pox, 7 occurred near Helston, and 4 in the village of Porthleven.

‡ 299: 2.—Of the deaths from small-pox, 12 occurred in October, 12 in November, and 6 in December; very few cases now remain in the sub-district.

§ 299: 3.—The fatal cases of small-pox were all in the parish of St. Keverne.

|| 299: 4.—There is no abatement of small-pox in this Sub-district. 7 persons have already died of this epidemic at the village of Ashton.

* 463 : 7.—A woman was delivered of a child on 4th November, and of another 33 days afterwards on 7th December ; the first child died of bronchitis on the day the second was born ; the mother is doing well. The case has been authenticated by the medical man who attended.

† 465 : 4.—Of the 18 deaths from fever, 15 were of the typhoid form.

‡ 468 : 2.—The correct area of this sub-district, according to the Ordnance Survey, is 1426 acres.

§ 467 : 8.—The sanitary condition of this sub-district is said to suffer from the want of connection between the houses and the sewers.

¶ 469 : 3.—A portion of the sewage water from Oldham runs through this township, and the atmosphere is more or less poisoned by foul condition of the mill lodges, some of which are connected with the sewers.

** 470 : 3.—Known as Castleton-without previously to 1st October 1872.

‡ 470 : 4.—Known as Castleton-within previously to 1st October 1872.

VIII.—NORTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1871.	Births Registered in the Quarter ending 31 Dec. 1872.	Deaths Average in Quar- ters ending 31 Dec. in the 3 Years 1869-71. Registered in the Quarter ending 31 Dec. 1872.	The DEATHS in the Quarter are stated by the Registrars to include													
					Deaths of Children under 1 Year of Age. Persons aged 60 Years & upwards.	Deaths from										Inquest Cases.	Deaths in Public Institutions.	
						Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping- cough.	Fever.	Diarrhoea.	Cholera.	Violence.

* 501: 1.—An explosion in the Morley Main Colliery on the 7th October caused 31 deaths.

† 508: 2.—Many of the cases of fever have occurred in the workhouse, but it has also prevailed in the localities where small-pox raged severely during the late epidemic, that is, in the poorer and low-lying parts of the district.

‡ 509: 2.—Of the 33 fatal cases of fever, 17 were described as typhoid or enteric.

§ 509: 3.—Of the 45 fatal cases of fever, 23 were described as typhoid or enteric.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING DECEMBER 31ST, 1872.

By JAMES GLAISHER, Esq., F.R.S., &c.

Till the 24th of October the weather was cold, notwithstanding a prevalence of S.W. and W.S.W. winds, and the average deficiency of daily temperature was $3^{\circ}\frac{3}{4}$. A warm period set in on the 25th, and continued till November 9th, the average daily excess of mean temperature being $3^{\circ}\frac{1}{2}$. From November 10th to November 19th was a steady cold period, with the wind from the N. and N.E., the average daily deficiency of temperature being $5^{\circ}\frac{1}{4}$. On November 20th a period followed of as warm weather as that preceding was cold, the daily excess on the average of 14 days ending December 3rd, being 6° . The direction of the wind was from the S.W. and W.S.W. This was succeeded by a period of changing weather, there having been a few days with excess and a few days with defect, alternately, the latter rather predominating, as the mean daily departure for 16 days ending December 19th was $1^{\circ}\frac{1}{2}$ below the average. On December 20th an extraordinary warm period set in and continued to the end of the year, the average daily excess for this period was more than 9° . The direction of the wind was almost constantly from the west. The mean temperature of the month of November was $2^{\circ}\frac{1}{4}$ below that in October, and that of December was about $2^{\circ}\frac{1}{4}$ below that of November, while the average decline at Greenwich from October to November is $7^{\circ}\frac{1}{4}$, and from November to December is $3^{\circ}\frac{1}{4}$. The mean decline from October to November from all stations was $2^{\circ}\frac{3}{4}$, and from November to December was $2^{\circ}\frac{1}{2}$.

The mean temperatures of November and December were above their averages, but this fact was greatly due to high night temperature; the average low night temperature in November was $40^{\circ}\cdot 8$; since 1841 the instances of average low night temperature in this month exceeding 40° , were:

1863 when it was $40^{\circ}\cdot 3$; 1852 when it was $44^{\circ}\cdot 1$; 1847 when it was $40^{\circ}\cdot 8$
 1857 " $40^{\circ}\cdot 6$; 1850 " $41^{\circ}\cdot 0$; 1848 " $40^{\circ}\cdot 3$

Therefore back to 1841 there have been only six Novembers with nights so warm as in November 1872.

The mean night temperature in December was $38^{\circ}\cdot 7$, the previous instances to 1841 are:

1868 when it was $41^{\circ}\cdot 1$; 1862 when it was $38^{\circ}\cdot 6$; 1852 when it was $42^{\circ}\cdot 4$
 1865 " $38^{\circ}\cdot 1$; 1857 " $39^{\circ}\cdot 6$; 1843 " $40^{\circ}\cdot 3$
 1842 " $40^{\circ}\cdot 2$

or 7 instances in all.

The readings of the barometer at 159 feet above the sea level were remarkably low throughout the quarter, the mean values for each month being:—October $29^{\circ}\cdot 533$ in., November $29^{\circ}\cdot 511$ in., and December $29^{\circ}\cdot 413$ in., and the departures below the averages were $0^{\circ}\cdot 171$ inches, $0^{\circ}\cdot 252$, and $0^{\circ}\cdot 397$ respectively. The ranges of readings in each month were, however, somewhat large, amounting to more than an inch in the first and last months and $1\frac{1}{2}$ in. in November. It is very rarely that such a long period of continuous depression is experienced. In 1841 the mean for the corresponding quarter was about $29^{\circ}\cdot 5$ in. but there has been no instance since that year of any approach to such low readings for so lengthened a time, though on several occasions the values for single months have been in defect of the number given above.

The principal movements during the quarter were as follows:—

Inches.				Inches.			
An increase to	30 [°] 199	on Oct.	6;	A decrease to	29 [°] 156	on Oct.	10.
"	29 [°] 850	"	14;	"	29 [°] 123	"	16.
"	29 [°] 614	"	19;	"	29 [°] 036	"	24.
"	29 [°] 913	"	29;	"	29 [°] 144	Nov.	2.
"	30 [°] 211	Nov.	7;	"	29 [°] 531	"	10.
"	29 [°] 910	"	12;	"	29 [°] 008	"	23.
"	29 [°] 622	"	27;	"	28 [°] 704	"	30.
"	29 [°] 834	Dec.	5;	"	28 [°] 689	Dec.	10.
"	29 [°] 841	"	12;	"	29 [°] 178	"	17.
"	29 [°] 740	"	22;	"	28 [°] 971	"	25.
"	29 [°] 793	"	30;	"	29 [°] 397	"	31.

The most remarkable feature has been the frequency of rain. During the quarter it has fallen at Greenwich on 67 days, a greater number than had been previously experienced at Greenwich back to the year 1815. The total fall is large, amounting to $11^{\circ}\cdot 32$ inches. The previous instances of large falls at Greenwich are as follows:—

Year.	Amount fallen.			Total fall in the Quarter.	Number of Days of Rain in			
	October.	November.	December.		Oct.	Nov.	Dec.	The Quarter.
1821 - -	in. 2 [°] 42	in. 4 [°] 33	in. 4 [°] 72	11 [°] 47	11	20	19	50
1822 - -	3 [°] 60	3 [°] 66	2 [°] 26	9 [°] 52	12	16	6	34
1824 - -	2 [°] 44	3 [°] 88	3 [°] 55	9 [°] 87	12	14	17	43
1831 - -	3 [°] 65	2 [°] 70	3 [°] 47	9 [°] 82	19	15	19	53
1832 - -	4 [°] 41	4 [°] 48	2 [°] 08	10 [°] 97	16	15	16	47
1833 - -	2 [°] 87	2 [°] 51	4 [°] 95	10 [°] 33	13	11	27	51
1841 - -	5 [°] 84	2 [°] 75	1 [°] 92	10 [°] 51	22	13	18	53
1844 - -	4 [°] 01	4 [°] 74	0 [°] 34	9 [°] 09	15	13	6	34
1852 - -	3 [°] 75	5 [°] 66	1 [°] 72	11 [°] 13	15	22	19	56
1865 - -	5 [°] 90	2 [°] 39	0 [°] 87	9 [°] 16	19	18	10	47
1868 - -	2 [°] 59	1 [°] 16	5 [°] 45	9 [°] 20	13	12	23	48
1872 - -	4 [°] 33	2 [°] 92	4 [°] 07	11 [°] 32	22	24	21	67

The Table shows that the total fall in the quarter has been but once exceeded, viz., in the year 1821, when it was 11.47 inches or 0.15 greater; back to 1815, there is only one other instance of a fall exceeding 11 inches, viz., in 1852. The Table shows that in 58 years there have been 12 instances of the fall in the three months ending December exceeding 9 inches, of which six were between 9 and 10; three between 10 and 11, and three exceeding 11 inches. The number of days of rain are shown in the last column, they differ greatly, and all are less in number than in the quarter just closed. This unusual frequency of rain has been general over the country. At Stonyhurst in Lancashire, rain fell on every day in the quarter except two, and at Guernsey on 80 days, and the general average over the country was 67 days. The amount at Guernsey is very remarkable being as large as 25½ inches. The average fall of rain from all the stations was 13.97 inches being more than double of the fall in the corresponding period of the year 1871, which was 6.09 inches. The smallest falls of rain at Greenwich in this quarter were in 1851, when it was 2.92 inches, and in 1871 when it was 3.17 inches, in both cases preceding the two heaviest falls.

The mean temperature of October was 47°·8, being 1°·8 lower than the average of the preceding 101 years; and lower than in any year back to 1850 when the value recorded was 47°·0.

The mean temperature of November was 45°·3, being 3°·0 higher than the average of the preceding 101 years, and higher than in any preceding year since 1863 (45°·7) and then again to 1857 (45°·8).

The mean temperature of December was 42°·9, being 3°·8 higher than the average of the preceding 101 years, higher than in the years 1869-71, but lower than in 1868 when 46°·0 was recorded.

The mean high day temperatures were respectively 1°·9 and 2°·0 higher than their averages in November and December, but 1°·8 lower in October.

The mean low night temperatures were higher than their averages in November and December by 3°·7 and 3°·2 respectively, but lower in October by 2°·7.

Therefore the days and nights were cold in October and warm in November and December.

The daily ranges of temperature were less than their respective averages in November and December by 1°·7 and 1°·2, but greater in October by 0°·8.

The fall of rain was 1.5 in., 0.6, and 2.1 in. in excess of the average in October, November, and December respectively.

The mean temperature of the air in the three months ending November, constituting the three autumn months, was 50°·2, being 0°·7 higher than the average for 101 years.

NOTE.—In reading this table it will be borne in mind that the minus sign (−) signifies below the average, and that the plus sign (+) signifies above the average.

Thunderstorms occurred on the 2d of October at Streatley; on the 3d at London, Royston, Somerleyton, Norwich, and Carlisle; on the 4th at Guernsey and Brighton; on the 5th at Eastbourne; on the 9th at Liverpool; on the 11th at Guernsey, Taunton, Llandudno, and Liverpool; on the 17th at Guernsey; on the 25th at Holkham; and on the 26th at Osborne, Brighton, Somerleyton, and Cokermonth. On the 1st of November at York; on the 2d at York; on the 9th at Guernsey; on the 10th at Hawarden; on the 19th at Cokermonth; on the 24th at Truro, Llandudno, and Cokermonth; on the 25th at Oxford; on the 26th at Eastbourne, Osborne, Ports-mouth, Brighton, and Lymington; and on the 30th at Sidmouth, Taunton, Aldershot Camp, Marlborough College, and Lampeter. On the 7th of December at Guernsey and Helston; on the 8th at Eastbourne; and on the 10th at Eastbourne.

Thunder was heard, but lightning was not seen, on the 2d of October at Streatley; on the 3d at Weybridge; on the 11th at Marlborough College and Hawarden; on the 24th at Guernsey; on the 26th at Portsmouth; on the 30th at Bywell; and on the 31st at Strathfield Turgiss. On the 2d of November at Truro; on the 9th at Halifax; on the 18th at Eastbourne; and on the 30th at Portsmouth and Wisbech. On the 25th of December at Bywell.

Lightning was seen, but thunder was not heard, on the 2d of October at Eastbourne and Carlisle; on the 3d at Brighton; on the 4th at Norwich; on the 5th at Osborne, Portsmouth, Brighton, Taunton, Lymington, Weybridge, and Oxford; on the 10th at Eastbourne; on the 11th at Eastbourne, Osborne, Brighton, Llandudno, and Stonyhurst; on the 12th at Eastbourne; on the 26th at Portsmouth, Aldershot Camp, Holkham, and Carlisle; and on the 31st at Hawarden, Eccles, Stonyhurst, York, and Carlisle. On the 1st of November at Guernsey, Oxford, and Silloth; on the 2d at Brighton; on the 9th at Oxford; on the 10th at Guernsey and Oxford; on the 17th at Brighton and Streatley; on the 25th at Guernsey, Truro, Oxford, Gloucester, and Llandudno; on the 26th at Truro, Bournemouth, Taunton, Oxford, Gloucester, and Llandudno; and on the 30th at Brighton and Salisbury. On the 1st of December at Hull; on the 2d at Guernsey; on the 8th at Salisbury; on the 9th at Eastbourne; and on the 24th at Liverpool and Silloth.

Solar halos were seen on the 1st of October at Brighton; on the 12th at Brighton; and on the 20th at Stonyhurst. On the 9th and 20th of November at Oxford. On the 2d of December at Salisbury and Oxford.

Lunar halos were seen on two occasions in October; three in November; and on eleven in December.

Aurora Boreales were seen on the 3d of October at Silloth and North Shields; on the 6th and 7th at Brighton; on the 14th at Guernsey; on the 17th at Oxford and Carlisle; on the 28th at Oxford; and on the 31st at Brighton. On the 2d of November at Brighton; on the 11th at Cokermonth and Carlisle; on the 15th at Helston. On the 1st of December at Oxford; on the 2d at Cokermonth; on the 9th at Oxford; and on the 26th at Stonyhurst.

Snow fell on the 10th of October at Allenheads and on the mountains of Carlisle; on the 11th and 12th on the mountains of Carlisle. On the 9th of November on the neighbouring mountains of Carlisle; on the 10th at Brighton, Royston, Halifax, York, Allenheads, on the neighbouring mountains of Carlisle, Bywell, and North Shields; on the 11th at London, Royston, Cardington, and Allenheads; on the 12th at Streatley, Hull, and Allenheads; on the 13th at Brighton, Salisbury, Weybridge, Streatley, Oxford, Royston, Wisbech, Hawarden, Eccles, Halifax, Hull, Stonyhurst, Allenheads, on the neighbouring mountains of Carlisle, Bywell, and North Shields; on the 14th at Brighton, Lymington, Marlborough College, Streatley, and Allenheads; on the 15th at Allenheads; on the 16th at Marlborough College, Streatley, and Allenheads; on the 17th at Allenheads; on the 18th at Somerleyton; on the 19th and 20th at Allenheads; and on the 25th at Eastbourne. On the 4th of December at North Shields; on the 5th at Taunton, Liverpool, Stonyhurst, Bywell, and North Shields; on the 6th at Norwich; on the 10th at Eastbourne, Royston, and Silloth; on the 12th at Oxford, Llandudno, Liverpool, Eccles, Stonyhurst, and Bywell; on the 13th at Stonyhurst, Bywell, and North Shields; on the 16th at Hull, and at Bradford began to fall at 11h. P.M., and was nearly 15 inches deep by 8h. A.M.; and on the 17th at Stonyhurst, Cokermonth, Carlisle, and North Shields.

Hail fell on forty-four different days during the quarter.

Fog was prevalent at one or other place on fifty-four days during the quarter, but mostly in the north.

Field Elm divested of leaves on the 27th of October at Carlisle; and on the 30th at Strathfield, Turgiss, and Hull. On the 10th of November at Weybridge; on the 15th at Guernsey; and on the 23d at Oxford.

Wych Elm divested of leaves on the 26th of October at Hull; and on the 30th at Strathfield Turgiss.

Oak divested of leaves on the 7th of November at Hull; and on the 15th at Guernsey.

Lime divested of leaves on the 17th of October at Oxford; on the 25th at Guernsey and Somerleyton; on the 27th at Hull and Carlisle; and on the 2d of November at Weybridge.

Sycamore divested of leaves on the 16th of October at Strathfield Turgiss; on the 20th at Helston; on the 27th at Hull; on the 29th at Carlisle; on the 31st at Guernsey; and on the 2d of November at Weybridge.

Horsechestnut divested of leaves on the 22d of October at Hull; on the 26th at Oxford; on the 29th at Carlisle; and on the 31st at Guernsey. On the 1st of November at Weybridge.

Common Poplar divested of leaves on the 12th of October at Helston; and on the 31st at Carlisle. On the 9th of November at Hull.

Occidental Plane divested of leaves on the 9th of November at Hull.

Oriental Plane divested of leaves on the 13th of November at Hull.

Hawthorne divested of leaves on the 16th of October at Helston; and on the 24th at Hull. On the 4th of November at Weybridge.

Spanish Chestnut divested of leaves on the 31st of October at Carlisle.

Beech divested of leaves on the 25th of October at Guernsey.

Hazel divested of leaves on the 7th of November at Hull.

Walnut divested of leaves on the 26th of October at Hull; on the 29th at Carlisle; and on the 30th at Oxford.

Thrush heard singing on the 24th of December at Strathfield Turgiss.

Blackbird heard singing on the 27th of December at Strathfield Turgiss.

Woodcock arrived on the 26th of October at Lampeter.

Fieldfare arrived on the 4th of November at Brighton.

Swallow departed on the 2d of October from Llandudno; on the 3d from Brighton; on the 4th from Oxford; on the 9th from Helston; on the 13th from Wisbech; on the 16th from Weybridge and Hull; on the 22d from Hawarden; and on the 24th from Taunton. On the 9th of November from Osborne.
